RAJU ERP

User Manual

A step-by-step guide for everyday business staff

Products · Inventory · Purchases · Distribution
Sales & GST invoices · Accounts · Reports · Administration

Version 1.0 · November 2026

All names, quantities and amounts in the examples are fictional and are used only to explain how the system works. They are not real customers, suppliers, products or financial records.

ABOUT

About this manual

Who it is for, how to use it, and what to keep in mind before you start.

What this manual is for

This manual explains how to use the RajuERP system in your daily work. It covers every menu in the left-hand sidebar: products, stock, purchases, distributors, sales invoices, GST, money received and paid, reports and user settings. It tells you what each screen is for, what to type, what happens when you press Save, and what to do next.

You do not need any computer or accounting knowledge to follow it. Every special word is explained the first time it appears, and there is a glossary at the end.

Who should read what

If you are…	Start with	Then read
Owner or manager	Quick start, Dashboard and Alerts	Reports, Accounts, the end-to-end tutorial
Warehouse or stock staff	Products, Inventory	Purchases (receiving goods), Distribution (dispatch), Sales returns
Accounts staff	Sales and invoices, GST explained	Accounts (payments, ledger, payables, expenses), Reports
Sales or order staff	Distributors and distribution	Orders, Pricing, Invoices
Administrator	Administration	Roles and permissions, Settings, Audit trail

How each screen is explained

Every screen is described in the same order, so you can find what you need quickly:

Heading	What it tells you
Purpose	What the screen is used for.
When to use it	The situation in which you should open it.
Before you begin	What must already exist or be done.
Steps	Numbered instructions: where to click and what to type.
Example (fictional data)	A realistic example. All names and amounts in this manual are invented.
Expected result	What you should see after you finish.
What changes in the system	Whether stock, an invoice, a balance or a status changes.
Common mistakes	Typical errors and how to correct them.
Next step	Which screen to visit next.

Important things to know first

> **IMPORTANT**
> **Everything in the examples is fictional.** The companies, products, batch numbers, prices and amounts shown in this manual are only for explanation. They are not real records. Do not copy them into your live data unless you really want them.

- **The manual describes the system as it is today.** If something is not available, the manual says so. Where a limitation exists, it is explained in the relevant section and summarised in the Troubleshooting chapter.
- **Most records cannot be changed after saving.** Dispatches, invoices, credit and debit notes, sales returns, goods receipts, supplier returns, write-offs, payments and stock-count approvals cannot be edited or deleted. If you make a mistake, it is corrected by a further entry (for example a credit note or a return). Check every screen carefully *before* you press the final button.
- **Check before you repeat.** If you are not sure whether a save worked, open the matching list page and look for the record. Saving a second time creates a second record (for example two payments or two receipts).
- **This system is not a full accounting package.** It does not keep double-entry books, and it does not file GST returns, create e-invoices or e-way bills. The GST summary is a helper for your accountant.
- **Backup:** the "Run backup now" button under Settings only adds a note to a history list. It does not copy your data anywhere. Real database backups must be arranged separately (see the Administration chapter).

Words used in this manual

Word	Meaning
Click / tick / select	Click with the mouse (or tap on a phone); tick a small box; choose from a list.
Field	A box on a form where you type or choose something. A red * means it must be filled in.
Dialog	A small window that opens on top of the page (for example "Add brand").
Toast	A short message that appears in a corner of the screen for a few seconds: green when something worked, red when it did not.
Record	One saved item, such as one product, one invoice or one payment.
Master data	Information you set up once and then reuse: brands, categories, units, products, suppliers and distributors.

CHAPTER 1

Quick-start guide

The shortest path from an empty system to your first invoice.

When you start with an empty system, do the steps below **in this order**. Each step needs the one before it. Details for every screen are in the chapters that follow.

The ten steps in plain words

1. **Sign in.** Open the application address given by your administrator. Type your email and password and click **Sign in**. Your administrator creates your account; there is no “forgot password” link, so ask your administrator to reset it.
2. **Check Settings (administrator).** Open **Administration** → **Settings & backup**. Make sure the **Company name**, **GSTIN** and especially the **State** are correct. The State decides whether your invoices carry CGST + SGST or IGST (see the GST chapter).
3. **Set up master data.** Under **Products**: add **Units** (for example Piece, Case), **Brands**, **Categories** and then your **Products**.
4. **Add suppliers.** Under **Purchases** → **Suppliers**. A supplier is not part of a product; it is chosen later on the purchase order.
5. **Create a purchase order** under **Purchases** → **Purchase orders**. This is only a request to the supplier. It does **not** add any stock.
6. **Receive the goods** when they arrive, under **Purchases** → **Goods receipts** → **Receive goods**. You type the batch number and the manufacturing and expiry dates. **This is the step that adds stock.**
7. **Add distributors and dealers** under **Distribution** → **Distributors & dealers**, with their state, credit limit and credit days. Optionally set special prices under **Pricing & terms**.

8. **Create an order and dispatch it** under **Distribution** → **Orders** and **Dispatches**. Dispatching allocates batches and **reduces your stock**.
9. **Invoice the dispatch.** The dispatch form has a box “Generate invoice after dispatch”, ticked by default. Otherwise use **Generate invoice** on the Invoices page. The invoice carries the GST and creates the amount the distributor owes you.
10. **Record the payment** under **Accounts** → **Payments received** → **Record payment** and apply it to the invoice.

> **WARNING**
> **Ordering is not receiving.** A purchase order never changes your stock. Stock goes up only when you record a **Goods receipt**. In the same way, an order to a distributor never changes stock; stock goes down only when you record a **Dispatch**.

Three golden rules

- **Set up master data before transactions.** Products need brands, categories and units. Orders need distributors and products. Nothing can be typed freely where the system expects a choice from a list.
- **Follow the order of the documents.** Purchase order → goods receipt. Order → dispatch → invoice → payment. Skipping a step usually means the next screen has nothing to choose from.
- **Check the list page after every save.** Every action ends with a green message and normally opens the new record. If you see a red message, nothing was saved. Read it; it says what to fix.

CHAPTER 2

Finding your way around

The sign-in screen, the sidebar, the header, lists, forms and messages that you will meet on every page.

Signing in and out

Where to find it: Address of the application → **Sign in** page

PURPOSE

To identify you and show only the menus your role may use.

WHEN TO USE IT

At the start of the working day, or whenever the system returns you to the sign-in page.

BEFORE YOU BEGIN

An account created for you by an administrator (Administration → Users).

STEPS

1. Type your **Email**.
2. Type your **Password**.
3. Click **Sign in**. You land on the page you were trying to open, or on the Dashboard.
4. To leave, click your name at the top right and choose **Sign out**.

EXAMPLE (FICTIONAL DATA)

Email *accounts.user@example.test* and the password your administrator gave you.

EXPECTED RESULT

The Dashboard opens and the sidebar shows the menus for your role.

WHAT CHANGES IN THE SYSTEM

- Signing in and out is recorded in the Audit trail.
- No stock or money is affected.

COMMON MISTAKES

- Wrong email or password: the red message says “Invalid email or password.” The same message is shown for an unknown email, a wrong password and a switched-off account.
- Too many tries in a minute are blocked for a short time. Wait and try again.
- If the session ends while you work, you are returned to the sign-in page (“Your session has expired. Please sign in again.”). Unsaved typing is lost.
- There is no “forgot password” link. Ask an administrator to set a new password for you.

NEXT STEP

Dashboard (Chapter 4).

The screen layout

- **Sidebar (left).** Dark panel with the groups: Overview, Products, Inventory, Purchases, Distribution, Sales, Accounts, Reports and Administration. Click a group name to open or close it. The group of the page you are on opens by itself. On a tablet or phone the sidebar is hidden; tap the menu button (three lines) at the top left to open it.

- **Header (top).** Shows where you are (for example "Accounts › Receivables"), the **search box**, the **bell** (alerts) and your name with a **Sign out** menu.
- **Page area.** A title, a short description, buttons at the top right (such as **Add product**) and the content below.
- **Menus you cannot see.** If your role has no access to an area, its menu is simply not shown. If you type the address of a page you may not use, the system shows "You don't have access to this area".

Search box and alert bell

- **Search** ("Search products, invoices, distributors…"): type at least **two** characters. Up to four matches per type appear: products (name or SKU), batches, invoices, suppliers, purchase orders, distributors, distribution orders and payment receipts. Use the arrow keys and Enter, or click a result. Only the types your role may view appear. Expenses, goods receipts, credit notes, returns and users are not searched.
- **Bell**: the red number is the total of all open alerts (expiry, low stock, overdue invoices, credit limit, returns to inspect). Click it to open the Alerts page. Alerts are worked out live; they disappear by themselves when the problem is fixed.

Lists and tables

Every list in the system works the same way:

Feature	How it works
Search box	Type part of a name, number or code. The list filters as you type.
Filters	Drop-down lists above the table (for example "All brands", "All statuses"). Choose one to narrow the list; choose the first option to clear it.
Period	A drop-down called **Period** on date-based pages: This month, Last month, Last 90 days, Last 6 months, All time, Custom range. Custom range shows **From date** and **To date**.
Sorting	Click a column heading to sort. Click again to reverse, and a third time to clear.
Page size	At the bottom: "Rows per page" (10, 25 or 50) with Previous and Next buttons and "Page 1 of 3".
Row menu	The three dots (…) at the end of a row open that row's actions (View, Edit, Delete and so on). Clicking a row often opens its detail page.
Export CSV	Downloads **all** rows that match your current search and filters (not only the visible page) as a file you can open in Excel. See Chapter 12.
Phone view	On a phone each row becomes a small card; some less important columns are hidden.

> **WARNING**
> **Check the period.** Many lists open on "Last 6 months". Older records, or records dated outside the range, are hidden until you change the Period. On the Audit trail and the Income & expense pages the drop-down label may not match the data shown; see those pages.

Forms, buttons and messages

- A red ***** after a label means the field is required. Optional fields have no star.
- When you press the save button, the system checks the form. Problems are shown in red under the field. Nothing is saved until all red messages are fixed.

- A **green** message in the corner means success (for example "Brand added"). A **red** message means the system refused the action; it says why. Server messages can start with a field name, for example "sku: SKU … already exists."
- While a save is in progress the dialog cannot be closed. Wait for the result.
- Delete buttons always ask for confirmation first. Records that are used elsewhere cannot be deleted; the message suggests marking them **inactive** instead (untick **Active**).
- Dates in documents (orders, dispatches, invoices, returns, notes) cannot be in the future. The date picker stops at today.

Document numbers

The system numbers documents itself, in the form **PREFIX-YEAR-NUMBER**, for example **INV-2026-0012**. The number restarts at 0001 each calendar year (based on the document date). You cannot change numbers or prefixes.

Prefix	Document	Prefix	Document
PO	Purchase order	ORD	Distribution order
GRN	Goods receipt	DSP	Dispatch
SRT	Supplier return	INV	Sales invoice
SPY	Supplier payment	CN / DN	Credit note / Debit note
WO	Write-off	RET	Sales return
REC	Stock reconciliation	RCT	Payment receipt (from a distributor)
EXP	Office expense	D001, D002…	Distributor code (automatic, can be set by hand)

Roles: who can do what

Every user has one **role**. The role decides which menus are visible and whether the user may only **view** or may also **change** records. The four roles are Administrator, Accounts, Warehouse and Sales. The table shows the *starting* settings; an administrator can change them (Administration → Roles & permissions).

None = the menu is hidden. **View** = can open and read, but the Add, Edit, Delete and Save buttons are hidden. **Edit** = can also change records.

Area (menu)	Admin	Accounts	Warehouse	Sales
Dashboard and Alerts	Edit	View	View	View
Products (product master, brands, categories, units)	Edit	View	View	View
Inventory	Edit	View	Edit	View
Purchases (orders, receipts, supplier returns, suppliers)	Edit	View	Edit	None
Distributors & dealers, Pricing	Edit	View	View	Edit
Distribution (orders, dispatches, distributor stock)	Edit	View	Edit	Edit
Sales (invoices, notes, returns)	Edit	Edit	View	Edit
Receivables (receivables, payments received, ledger)	Edit	Edit	None	View
Payables (supplier payments)	Edit	Edit	None	None

Area (menu)	Admin	Accounts	Warehouse	Sales
Expenses (office expenses, income & expense)	Edit	Edit	None	None
Reports	Edit	View	View	View
Administration	Edit	None	None	None

NOTE

The real checks are made by the server. Even if a button were visible, the server refuses an action the role is not allowed to do ("You do not have permission to perform this action."). Hiding buttons is only for convenience.

WARNING

Warehouse staff and invoices. The Warehouse role can dispatch goods but can only *view* Sales. On the dispatch form, the box "Generate invoice after dispatch" is ticked by default. For warehouse users the dispatch is saved, then the invoice step fails with a permission message. Warehouse users should **untick** that box; Accounts or Sales staff then generate the invoice.

CHAPTER 3

What must exist first

The most common reason a drop-down list is empty is that an earlier step was skipped. This chapter lists the prerequisites for every important action.

Prerequisites at a glance

To do this...	These must already exist	If something is missing
Add a **product**	At least one **brand**, one top-level **category** and the **units** you want for Base unit and Pack unit. (Subcategory optional.) A supplier is **not** needed.	The Brand, Category or Unit drop-down is empty and you cannot save. Add them first.
Create a **purchase order**	An active **supplier** and at least one active **product**.	Supplier or Product lists are empty.
Receive goods	A purchase order that is **Ordered** or **Partially received**. Draft, Received and Cancelled orders cannot be received.	"There are no open purchase orders to receive against." Open the order and use "Save & mark ordered".
Create a **distribution order**	An **active distributor** and active products. Special prices are optional.	The distributor list is empty, or the Add product button stays disabled ("Select a distributor first").
Dispatch an order	A **Confirmed** (or Partially dispatched) order, and **saleable, unexpired stock** in batches (from goods receipts).	"No saleable, unexpired stock available...". Receive goods first. A Draft order must be confirmed first.
Create an **invoice**	A **dispatch** that has not been invoiced yet. (An invoice is always made from a dispatch.)	"Every dispatch has already been invoiced. Record a new dispatch first."
Record a **payment**	An active **distributor**. For allocation: open (unpaid) **invoices** of that distributor.	"No open invoices. The full amount will be kept on account."
Record a **sales return**	An **invoice** with returnable quantity left.	The Invoice list is empty until you choose the distributor. Over-returning is refused.
Record a **supplier return**	A **batch received from that supplier** with stock on hand.	"No batches from this supplier have stock on hand."
Record a **write-off**	A batch with stock on hand in some bucket.	The Batch list shows only batches with stock.
Start a **stock count**	Batches (from goods receipts).	Nothing to add to the count.
Record a **supplier payment**	A supplier. (An outstanding balance is not required, but then the amount shows as an advance.)	Supplier list empty.
Record an **office expense**	At least one **expense category** (Manage categories).	Category list empty.
Use a **report**	Invoices, receipts or payments dated within the chosen Period.	"No sales in this period". Widen the Period.

Why the order matters

- **Batches only come from goods receipts.** You cannot create a batch by hand. So there is no stock to dispatch until you have received goods.

- **Dispatch is the only way sales stock leaves.** An invoice never moves stock. If you invoice without dispatching, nothing is reduced; if you dispatch without invoicing, the stock is gone but the distributor has not been billed.
- **An invoice is the amount owed.** There is no separate receivable record. The invoice itself creates what the distributor owes you, and payments reduce it.
- **Payments are applied to invoices.** A payment you do not allocate stays “on account”. It lowers the distributor's overall balance but not the outstanding amount of any particular invoice until you allocate it.

Before you repeat an action

- Search the matching list (for example Purchase orders, Goods receipts, Payments received) for the document you just saved.
- Check the date range and filters on that list, so you are not missing a record that is simply hidden.
- Do not press Save again after a slow response. Wait for the green or red message.
- If a document was saved twice by mistake, you cannot delete it. Use the correcting document: a credit note, a sales return, a supplier return or a write-off, as appropriate, and tell your administrator.

CHAPTER 4

Dashboard and Alerts

Your business at a glance, and the list of things that need attention today.

Dashboard

Where to find it: Sidebar → **Overview** → **Dashboard** (the first page after sign-in)

PURPOSE

A one-page summary of stock, sales, purchases, money received, money owed and expiry problems.

WHEN TO USE IT

At the start of every day, and before any meeting about the business.

BEFORE YOU BEGIN

Nothing to prepare. Every role can open the Dashboard. The numbers are calculated live from your records, so an empty system shows zeros.

STEPS

1. Open **Dashboard**.
2. Read the eight cards across the top (explained below). Each card is a link: click it to open the screen behind the number.
3. Look at the three charts and the four lists. Each list has a **View all** link and each row can be clicked.
4. If a card or list shows a problem, use the table “What to do next” to decide where to go.

EXAMPLE (FICTIONAL DATA)

A card “Sales this month (excl. GST) ₹3,234” with “▲ 12% vs last month” means invoices dated this month total ₹3,234 before GST, 12% more than last month.

EXPECTED RESULT

You can see at a glance whether stock is healthy, whether customers are paying, and whether any batch is about to expire.

WHAT CHANGES IN THE SYSTEM

Nothing changes. The Dashboard only reads data.

COMMON MISTAKES

- Reading “Sales this month” as the money you earned. It is the invoiced value **before GST** and it does **not** subtract sales returns.
- Reading “Purchases this month” as purchase orders. It counts **goods receipts** (goods that actually arrived).
- Assuming the figures include older months. Cards marked “this month” use the current calendar month only.

NEXT STEP

Open the screen behind any card that looks wrong (see the table).

The eight cards

Card	What the number means	Click to open
Stock value (saleable, at cost)	Sellable units in unexpired batches multiplied by their batch cost. Damaged, expired and inspection stock is not included.	Stock valuation

Card	What the number means	Click to open
Sales this month (excl. GST)	Total taxable value of invoices dated this month, with a comparison to last month. Returns are **not** subtracted.	Sales & profitability report
Purchases this month (excl. GST)	Taxable value of goods receipts this month.	Goods receipts
Collections this month	Payments received from distributors this month (full amount of each payment).	Payments received
Receivables outstanding	What distributors owe you (only balances above zero are added up). The hint shows how much of it is overdue.	Receivables
Payables outstanding	What you owe suppliers (goods received minus returns minus payments).	Payables
Expiry alerts	Number of expiring plus expired batches.	Alerts
Low-stock products	Number of active products that are low or out of stock. The hint shows open orders waiting for dispatch.	Stock overview

Charts and lists

Panel	What it shows
Sales, purchases and collections	Bars for the last 6 months: sales (before GST), purchases (before GST) and money collected.
Sales by brand	Last 3 months, before GST, after subtracting returns.
Top distributors	The six distributors with the highest sales in the last 3 months, next to what they currently owe.
Recent invoices	The six latest invoices with total and payment status.
Overdue invoices	Invoices past their due date, most overdue first (empty message: “Nothing overdue.”).
Expiring & expired batches	Expired batches first, then the soonest to expire.
Low stock	Products below their minimum stock, with the minimum and the available quantity.
Bottom strip	A link to open orders waiting for dispatch, and the number of expired batches still to be written off.

What to do next

If you see…	Go to	Typical action
Low-stock products above zero	Inventory → Stock overview (filter “Low stock”)	Create a purchase order for those products.
Expired batches to write off	Alerts → Expiry, then Expired write-offs	Record a write-off so the expired stock leaves the books.
Overdue invoices	Accounts → Receivables → “Due & overdue invoices”	Contact the distributor; record the payment when it arrives.
Open orders waiting for dispatch	Distribution → Orders	Dispatch the confirmed orders.
Payables outstanding is high	Accounts → Payables	Plan supplier payments.

Alerts

Where to find it: Sidebar → **Overview** → **Alerts**, or click the **bell** in the header

PURPOSE

One place that lists every problem that needs a decision: expiry, low stock, overdue payments, credit limit and returned goods waiting for inspection.

WHEN TO USE IT

Daily, and whenever the bell shows a red number.

BEFORE YOU BEGIN

Any role with Dashboard access can see all tabs. Action buttons in the row menus appear only if your role may change the related records.

STEPS

1. Open **Alerts**. Six cards show the counts: Expired stock, Expiring soon, Low / out of stock, Overdue invoices, Over credit limit, Returns to inspect.
2. Click a card, or one of the tabs (**Expiry**, **Low stock**, **Overdue payments**, **Credit limit**, **Pending inspection**).
3. Use the search box to find a product, batch or distributor, or **Export CSV** to share the list.
4. Open the **...** menu on a row for the next action (see the table below).

EXAMPLE (FICTIONAL DATA)

Expiry tab: "Sesame Chikki 100g, batch SC-260801-A, expires 14 Nov 2026, 12 days left, 20 units at risk, value ₹800". Row menu: **Write off** or **View batch**.

EXPECTED RESULT

A tab with no problems shows "All clear".

WHAT CHANGES IN THE SYSTEM

Nothing changes by opening Alerts. An alert is not a task you dismiss: it disappears by itself when its cause is fixed. The bell number is the sum of all rows on all tabs.

COMMON MISTAKES

- Waiting for the alert to "go away" without fixing the cause. Expired stock stays in the list until it is written off or moved.
- Expecting the low-stock row action "Create purchase order" to pick the product. It only opens a new order; you choose the product yourself.

NEXT STEP

Follow the row action; see the table.

Every alert type

Alert	Why it appears	What to check	Next screen and action	Cleared when
Expired stock	A batch whose expiry date has passed still holds saleable or expired units.	Is the stock physically still there? What is the value?	Row menu **Write off** (opens Expired write-offs with the batch chosen).	The units are written off, or removed by a supplier return.

Alert	Why it appears	What to check	Next screen and action	Cleared when
Expiring soon	Days to expiry are 30 or fewer (red, “Expires ≤ 30d”), or within the Expiry alert window set in Settings (default 90 days, amber “Expiring soon”). Only batches with saleable units are listed.	Can the stock be sold or returned to the supplier before it expires?	Dispatch it first (the dispatch screen suggests the earliest expiry first), or **View batch**.	The units are sold, returned or written off.
Low / out of stock	An **active** product has fewer saleable, unexpired units than its Minimum stock (Low), or zero (Out of stock). A product that never had stock is “Out of stock” even if its minimum is 0.	Is a purchase order already open? Is the minimum realistic?	Row menu **Create purchase order**, or lower the minimum / untick Active on the product.	Goods are received, or the product's minimum or status is changed.
Overdue payments	An invoice still has an amount outstanding and its due date is before today.	Has the payment arrived but not been allocated?	Row menu **Record payment** or **View invoice**.	Payments or credit notes cover the invoice.
Credit limit	A distributor's balance is higher than its credit limit (limit of 0 is never flagged).	Is the limit correct? Is a payment pending?	Row menu **View ledger**. Collect payment or raise the limit under Distributors.	The balance falls below the limit or the limit is raised.
Pending inspection	A sales return line was classified “Needs inspection”.	Has the returned stock been checked?	**Open sales returns** → return → **Decide disposition**.	A decision (Saleable, Damaged or Expired) is recorded for every such line.

CHAPTER 5

Products

Brands, categories, units and the product master. This is the master data that everything else uses.

Products are the first thing to set up, because purchase orders, stock, distribution orders and invoices all refer to them. Four screens belong to this area, found under **Products** in the sidebar:

Screen	What it holds	Needed before
Units & packaging	Units of measure such as Piece and Case, and optional conversions.	Product master (Base unit and Pack unit)
Brands	Your own brands and third-party brands.	Product master
Categories	Categories and subcategories (two levels).	Product master
Product master	The products themselves, with prices and GST.	Purchase orders, orders, stock

BEFORE YOU START

Set up in this order: Units → Brands → Categories → Products. If you try to add a product first, its Brand, Category and Unit lists will be empty.

NOTE

Is a supplier needed to create a product? No. A product has no supplier field. Any supplier can be chosen on any purchase order line. The supplier is recorded on the purchase order, on the goods receipt and on each stock batch. The product's purchase price is only a *default rate* that the purchase order form suggests; you can change the rate on each order.

Units & packaging

Where to find it: Sidebar → **Products** → **Units & packaging** (two tabs: **Units** and **Conversions**)

PURPOSE

To list the units in which you count stock (Piece, Kg) and the larger packs you buy and ship in (Case, Carton).

WHEN TO USE IT

Once at the start, and whenever you meet a new type of pack.

BEFORE YOU BEGIN

Permission to edit Products (Administrator by default).

STEPS

1. Open the **Units** tab and click **Add unit**.
2. Type the **Unit name** (for example Case) and a **Short code** (for example Case). Both are required. Names and codes must be unique.
3. Click **Add unit** to save. Repeat for each unit.
4. Optional: open the **Conversions** tab, click **Add conversion**, choose the **From unit**, the **To unit** and the **Quantity in the to-unit** (for example 1 Case = 10 Piece).

EXAMPLE (FICTIONAL DATA)

Units: **Piece (Pcs)** and **Case (Case)**. Conversion: 1 Case = 10 Pcs.

EXPECTED RESULT
The unit appears in the Base unit and Pack unit lists on the product form.

WHAT CHANGES IN THE SYSTEM
- Adds a record only. No stock is affected.
- **Conversions are a reference list only.** The system does not use them to convert quantities. What matters for stock is the **Pack size** on each product.

COMMON MISTAKES
- Choosing two identical units for a conversion ("Choose two different units").
- Trying to delete a unit already used by a product or conversion: it is refused ("it is used by … products").

NEXT STEP
Brands.

Brands

Where to find it: Sidebar → **Products** → **Brands**

PURPOSE
To keep company-owned brands separate from third-party (external) brands. Reports show own brands against external brands.

WHEN TO USE IT
When you start to sell a new brand.

BEFORE YOU BEGIN
Permission to edit Products.

STEPS
1. Click **Add brand**.
2. Type the **Brand name** (required, unique, up to 80 characters).
3. Choose the **Brand type**: **Own brand (company-owned)** or **External brand (third-party)**.
4. Leave **Active** ticked. Add **Notes** if you wish (optional).
5. Click **Add brand**. A green "Brand added" message appears.

EXAMPLE (FICTIONAL DATA)
Brand "Greenleaf" (Own brand), brand "Nandini Foods" (External brand).

EXPECTED RESULT
The brand appears in the list with its type badge and the number of products.

WHAT CHANGES IN THE SYSTEM
A record is added. "Own" and "External" only change a label and the brand reports; they do not change any rules.

COMMON MISTAKES
- Deleting a brand that has products: refused. Untick **Active** instead. (Inactive brands still appear in the product form's Brand list.)

NEXT STEP
Categories.

Categories and subcategories

Where to find it: Sidebar → **Products** → **Categories**

PURPOSE

To group products, for example Snacks and, inside it, Namkeen.

WHEN TO USE IT

Before adding products; later whenever you need a new group.

BEFORE YOU BEGIN

Permission to edit Products.

STEPS

1. Click **Add category**.
2. Type the **Name** (required).
3. To create a **subcategory**, choose a **Parent category**. Leave it as "None (top-level category)" to create a main category.
4. Click **Add category** to save.

EXAMPLE (FICTIONAL DATA)

Category "Snacks" (top level), subcategory "Namkeen" with parent "Snacks".

EXPECTED RESULT

Subcategories appear indented under their category. The Level column says Category or Subcategory.

WHAT CHANGES IN THE SYSTEM

A record is added. There are only two levels: a subcategory cannot have its own subcategories.

COMMON MISTAKES

- Naming a subcategory the same as another subcategory under the same parent ("already exists here").
- Choosing a subcategory that does not belong to the chosen category on the product form ("Subcategory does not belong to the selected category").
- The search box reads "Search categorys…". That is only a spelling slip on the screen; it works normally.

NEXT STEP

Product master.

Product master

Where to find it: Sidebar → **Products** → **Product master**

PURPOSE

The list of everything you buy and sell, with SKU, brand, category, packaging, prices and GST rate.

WHEN TO USE IT

Whenever you start to deal in a new item, or need to change a price or GST rate.

BEFORE YOU BEGIN

- At least one **Unit** (two if the base unit differs from the pack unit), one **Brand** and one **Category**.

STEPS

1. Click **Add product**.
2. Fill the form (field meanings are in the next table).
3. Click **Add product** to save. A green "Product added" message appears.

4. To change a product later, open the row menu **…** → **Edit**.

EXAMPLE (FICTIONAL DATA)

See the complete example on the next page.

EXPECTED RESULT

The product appears in the list with a margin percentage, and becomes available in purchase orders, distribution orders and special pricing.

WHAT CHANGES IN THE SYSTEM

- Adds a master record only. No stock, no document and no balance is created.
- Editing a product does not rewrite old documents. Invoices and orders keep the rate they were created with.
- Marking a product **inactive** hides it from new purchase orders and orders and removes it from the low-stock alerts.

COMMON MISTAKES

- Duplicate SKU: “SKU … already exists.” (not case-sensitive).
- Typing the pack size as the number of cases. Pack size is how many **base units** are in **one pack**.
- Entering prices with GST included. All prices are **before GST**.
- Deleting a product that has ever been used: refused. Untick **Active** instead.

NEXT STEP

Suppliers (Chapter 7), then a purchase order.

The product form, field by field

Field	Required?	What to enter
SKU	Yes	Your own unique code for the product, up to 30 characters (example “MP-200”). Must not repeat.
Product name	Yes	The full name, for example “Masala Peanuts 200g”.
Brand	Yes	Choose from the Brands you created.
Category	Yes	Choose a main category.
Subcategory	No	Optional. Must belong to the chosen category.
Base unit	Yes	The smallest unit in which you count stock, e.g. Piece. **All stock quantities are kept in this unit.**
Pack unit	Yes	The bigger unit you buy or ship in, e.g. Case.
Pack size (base units per pack)	Yes	A whole number, at least 1. For 10 pieces per case enter 10. Use 1 if the item has no larger pack.
Minimum stock (base units)	Yes	A whole number, 0 or more. When available stock falls below this, the product is flagged as **Low stock**.
Purchase price (₹)	Yes	Price per **base unit** you pay the supplier, before GST. Must be above zero. Used only as the default rate on purchase orders.
Selling price (₹)	Yes	Standard price per base unit you charge, before GST. Must be above zero. It is the default rate on distribution orders unless the distributor has a special price.
GST rate (%)	Yes	Choose 0%, 5%, 12%, 18% or 28%. Ask your accountant which rate applies.
HSN code	No	Up to 10 characters. A standard goods-classification number printed on invoices (see below).

Field	Required?	What to enter
Active	—	Ticked = can be used. Untick to retire a product without deleting it.

Base unit, pack unit and pack size explained

Think of a shop that sells packets of peanuts. A single packet is the **base unit** (Piece). The supplier delivers them in boxes of ten; a box is the **pack unit** (Case). The **pack size** is ten, because one Case holds ten Pieces.

- All stock is counted in Pieces. If you receive 100 Pieces, the system stores 100.
- Wherever a quantity is an exact number of packs, the screen also shows the packs: **100 Pcs (10 Case)**. A quantity such as 105 Pieces is shown as **105 Pcs**, with no pack figure.
- Prices are always **per Piece** (the base unit), never per Case.
- If an item is sold loose, such as rice by weight, use Kg as the base unit and set the pack size to 1.

What is an HSN code?

HSN stands for Harmonised System of Nomenclature. It is a standard number that classifies goods for GST. Different goods have different HSN codes. In this system the HSN code is optional text on the product. It is printed in the HSN column of the tax invoice and helps your accountant when GST returns are prepared. It does **not** choose the GST rate for you: you set the rate yourself. Ask your accountant for the correct HSN code and rate for every product.

Worked example: creating a product from scratch

Fictional business: **Greenleaf Snacks**, based in Karnataka, which sells packaged snacks. We will create **Masala Peanuts 200g**.

1. **Units.** Open **Products → Units & packaging → Units → Add unit**. Add *Piece* with short code *Pcs*. Add again: *Case* with short code *Case*.
2. **Brand.** Open **Products → Brands → Add brand**. Brand name *Greenleaf*, Brand type *Own brand (company-owned)*. Click **Add brand**.
3. **Categories.** Open **Products → Categories → Add category**. Name *Snacks*, parent none. Add again: name *Namkeen*, Parent category *Snacks*.
4. **Product.** Open **Products → Product master → Add product** and fill the form as in the table below.
5. Click **Add product**. A green “Product added” message appears and the product shows in the list.

Field	Example value	Why
SKU	MP-200	Unique code for stock-taking and search.
Product name	Masala Peanuts 200g	What staff and invoices will show.
Brand	Greenleaf	Created in step 2.
Category / Subcategory	Snacks / Namkeen	Created in step 3.
Base unit	Piece (Pcs)	Stock is counted in single packets.
Pack unit	Case (Case)	Cartons from the supplier.
Pack size	10	10 packets in one case.
Minimum stock	30	Warn when fewer than 30 packets are available.
Purchase price (₹)	40.00	Cost per packet before GST.
Selling price (₹)	55.00	Standard price per packet before GST.

Field	Example value	Why
GST rate (%)	12%	Illustrative only; confirm with your accountant.
HSN code	2008	Illustrative only; confirm with your accountant.
Active	Ticked	Product can be ordered and sold.

TIP
Result: the list shows MP-200 with "10 Pcs / Case", purchase ₹40.00, selling ₹55.00, a margin of 27.3% ((55 − 40) ÷ 55) and GST 12%. The product now exists, but you have **no stock** of it. Stock appears only after goods are received (Chapter 7).

WARNING
This is fictional data. Do not leave example products in a live system. Because a product that has been used cannot be deleted, create test products only in a practice copy.

CHAPTER 6

Inventory

How the system counts your stock, where every unit came from, and how to keep the figures right.

Key ideas in plain language

- **A batch** is one production lot of a product, as printed on the pack: it has a **batch number**, a **manufacturing date** and an **expiry date**. Two lots of the same product can have different expiry dates, so the system tracks each lot separately.
- **Batches are created only by Goods receipts.** When you receive goods you type the batch number from the supplier's pack. You cannot create, edit or delete a batch by hand, and a product's creation form never asks for one.
- **Stock is never typed in as a number.** The system keeps a history of every change, called **stock movements**. The quantity you see is simply the total of the movements for that batch. This is why every unit can be traced to a document.
- **Buckets.** Within a batch, stock sits in one of four buckets: **Saleable** (can be dispatched), **Damaged**, **Expired** and **Inspection** (waiting for a decision). Only Saleable stock can be dispatched to distributors.
- **Available stock** means saleable units in batches that have **not** passed their expiry date. Saleable units in a batch that has expired are not counted as available.
- **Expiry dates matter.** A batch cannot be dispatched after its expiry date (a batch expiring today can still be dispatched). The dispatch screen suggests the batch with the **earliest expiry** first.

What changes stock

Action	Effect on stock	Bucket
Goods receipt	+ units (creates or tops up a batch)	Saleable
Dispatch to a distributor	− units	Saleable
Sales return	+ units, into the bucket you choose on the return	Saleable, Damaged, Expired or Inspection
Inspection decision on a returned line	Moves units out of Inspection into the outcome you choose	Inspection → Saleable / Damaged / Expired
Supplier return	− units	Any bucket
Write-off	− units	Any bucket
Stock reconciliation (when approved)	+ or − the difference between the physical count and the system	Saleable only

> **WARNING**
> **Nothing else changes stock.** Purchase orders, distribution orders, order confirmation, invoices, credit and debit notes, payments and draft stock counts do **not** change stock. There is also no screen to type in a stock adjustment: differences are corrected through a reconciliation (below).

Expiry status colours

Status	Rule (days until expiry)	Shown as
Expired	Less than 0 (date has passed)	Red, “Expired 12d ago”

Status	Rule (days until expiry)	Shown as
Critical	0 to 30 days	Red, "Expires ≤ 30d"
Expiring soon	31 days up to the Expiry alert window in Settings (default 90 days)	Amber
OK	More than the alert window	Green

Stock overview

Where to find it: Sidebar → **Inventory** → **Stock overview**

PURPOSE

Current stock for every product, summed over all its batches.

WHEN TO USE IT

To answer "how much do we have?" and to find products that are low or out of stock.

BEFORE YOU BEGIN

Products and received goods. With no goods receipts the screen shows zeros.

STEPS

1. Open **Stock overview**.
2. Read the four cards: **Products in stock**, **Saleable stock value**, **Low / out of stock**, **Held for disposition**.
3. Use the filters: search, **All brands**, **All categories** and **All stock levels** (In stock, Low stock, Out of stock).
4. Open a row's **...** menu for **View batches** or **Create purchase order**.

EXAMPLE (FICTIONAL DATA)

MP-200 Masala Peanuts 200g: Available 40 Pcs (4 Case), Expired 0, Damaged 5, Inspection 0, Min stock 30, status In stock, value ₹1,600.00.

EXPECTED RESULT

One row per product with Available, Expired, Damaged, Inspection, Min stock, Status and Value.

WHAT CHANGES IN THE SYSTEM

Nothing changes; it is a read-only summary.

COMMON MISTAKES

- Confusing Available with all units on hand. Available counts only **saleable, unexpired** units.
- Expecting damaged or inspection units in the Available figure. They are shown in their own columns.
- Saleable units in an expired batch show under **Expired**, not under Available.

NEXT STEP

Batches & expiry.

Batches & expiry

Where to find it: Sidebar → **Inventory** → **Batches & expiry**

PURPOSE

Every batch with its manufacturing and expiry dates, days to expiry and quantity in each bucket.

WHEN TO USE IT

To check expiry dates, to find where a particular lot is, or to start a write-off.

BEFORE YOU BEGIN

Batches exist only after goods have been received.

STEPS

1. Open **Batches & expiry**. By default only batches with stock are shown (the box **With stock only** is ticked).
2. Use the expiry chips (**Expired**, **Expiring ≤ 30 days**, **Expiring soon**, **OK**) to focus on a group. Each chip shows a live count.
3. Search by batch number or product, or filter by brand.
4. Open a row's **…** menu: **Write off** (opens the write-off form with this batch chosen) or **View movements**.

EXAMPLE (FICTIONAL DATA)

Batch **MP-261014-A**: Mfg 8 Oct 2026, Expiry 8 Oct 2027, Saleable 20, Damaged 5, On hand 25, Unit cost ₹40.00, Stock value ₹1,000.00.

EXPECTED RESULT

A table of batches with Mfg date, Expiry, Days to expiry, the four bucket quantities, On hand, Unit cost and Stock value.

WHAT CHANGES IN THE SYSTEM

Nothing changes; batches cannot be edited here. Unit cost is the purchase-order rate at the time the batch was first received. Receiving the same batch number again adds to it and keeps the original cost.

COMMON MISTAKES

- Looking for a batch that has no stock. Untick **With stock only** to see empty batches.
- Expecting to add a batch here. Batches are created only by **Goods receipts**.

NEXT STEP

Stock movements.

Stock movements

Where to find it: Sidebar → **Inventory** → **Stock movements**

PURPOSE

The full history of every stock change. It is the proof behind every quantity shown elsewhere.

WHEN TO USE IT

When a quantity looks wrong, or when someone asks “where did these units go?”.

BEFORE YOU BEGIN

None.

STEPS

1. Open **Stock movements**. The newest movements are at the top.
2. Filter by **All types** (Receipt, Dispatch, Sales return, Supplier return, Adjustment, Write-off, Reclassification), **All buckets** and the **Period**.
3. Use the search box for a product, batch or document number.
4. Read the **Reference** column: it shows the document (for example GRN-2026-0001) and its type.

EXAMPLE (FICTIONAL DATA)

+80 Receipt, saleable, GRN-2026-0001; −60 Dispatch, saleable, DSP-2026-0001; +5 Sales return, damaged, RET-2026-0001.

EXPECTED RESULT

A table with Date, Type, Product, Batch, Bucket, Qty (green + or red −), Reference, Note and By.

WHAT CHANGES IN THE SYSTEM

Read-only. Movements cannot be added, edited or deleted.

COMMON MISTAKES

- Looking for a movement outside the selected Period.
- Expecting a movement when a purchase order or invoice is created. Only receipts, dispatches, returns, write-offs, inspection decisions and approved counts create movements.

NEXT STEP

Stock valuation.

How to investigate a stock difference

1. Open **Batches & expiry** and find the batch. Note the quantity in each bucket.
2. Click **View movements** (or open Stock movements and search the batch number).
3. Read the history from the oldest movement. Check the Reference of each line; open the document if needed.
4. Decide the cause: a missing goods receipt, a dispatch recorded against the wrong batch, a return put in the wrong bucket, or physical loss.
5. If the physical count really differs from the system, use **Reconciliation** to record the count and post an adjustment. Do not create documents just to "fix" numbers.

Stock valuation

Where to find it: Sidebar → **Inventory** → **Stock valuation**

PURPOSE

The value of the stock you hold, using a costing method.

WHEN TO USE IT

At month end, or when your accountant asks for the stock value.

BEFORE YOU BEGIN

Goods received (batches with a cost).

STEPS

1. Open **Stock valuation**.
2. Choose **FIFO** or **Weighted average** with the buttons at the top. This only changes the view; the default is set by the administrator in Settings → Inventory.
3. Read the cards **Saleable stock value**, **Held for disposition** and **Costing method**.
4. Use **Export CSV** for a copy.

EXAMPLE (FICTIONAL DATA)

Product with 40 saleable Pcs, bought as 80 @ ₹40 and 20 @ ₹40: both methods give ₹1,600. When costs differ, the methods give different values.

EXPECTED RESULT

A table with Saleable qty, Unit cost, Stock value and Held value per product, with totals at the bottom.

WHAT CHANGES IN THE SYSTEM

Read-only.

COMMON MISTAKES

- Comparing this value with the Stock overview value and expecting an exact match. They can differ because valuation includes saleable units in expired batches and uses FIFO or average cost, while Stock overview uses each batch's own cost for unexpired units.
- Assuming the toggle on the page is saved. It is a temporary view.

NEXT STEP

Expired write-offs.

FIFO (first in, first out) assumes the oldest receipts are sold first, so what remains is valued at the cost of the newest receipts. **Weighted average** averages the cost of all receipts of a product by quantity and values the remaining stock at that average. **Held value** is the value of damaged, expired and inspection stock, always at batch cost.

Expired write-offs

Where to find it: Sidebar → **Inventory** → **Expired write-offs**

PURPOSE

To remove expired or unusable stock from the books, with a record of the reason and value.

WHEN TO USE IT

When the Alerts page shows expired stock, or when stock is destroyed or lost.

BEFORE YOU BEGIN

Permission to edit Inventory; a batch with stock on hand.

STEPS

1. Open **Expired write-offs**. A red banner lists expired batches still holding stock, with a **Write off all expired** button that fills the form for you.
2. Or click **Record write-off**.
3. Choose the **Date** and type a **Reason** (required).
4. For each line choose the **Batch**, the **Stock bucket** (the list shows each bucket's quantity) and the **Qty**. Use **Add batch** for more lines.
5. Check the total value and click **Record write-off**. A green “Write-off recorded” message appears.

EXAMPLE (FICTIONAL DATA)

Reason “Expired stock disposal”: batch MP-261014-A, bucket Expired, Qty 20. Value 20 × ₹40 = ₹800.

EXPECTED RESULT

A new write-off, numbered WO-2026-0001, appears in the list. Click **View** to see its lines.

WHAT CHANGES IN THE SYSTEM

- **Stock reduces** by the written-off quantity in the chosen bucket. The movement type is Write-off.
- A write-off cannot be edited or undone.

COMMON MISTAKES

- Entering more than the bucket holds (“Only N in … stock”).
- Writing off the wrong bucket. Check the quantity shown next to each bucket name.
- Any bucket, including Saleable, can be written off; you are not limited to expired batches. Take care.

NEXT STEP

Reconciliation.

Reconciliation (stock count)

Where to find it: Sidebar → **Inventory** → **Reconciliation**

PURPOSE

To compare the stock in the system with a physical count and correct differences.

WHEN TO USE IT

After counting the shelves, for example every month.

BEFORE YOU BEGIN

Permission to edit Inventory; batches with saleable stock.

STEPS

1. Click **New stock count**.
2. Choose the **Count date**; add **Notes** if you like.
3. Add batches: pick one under "Select a batch…" and click **Add**, or choose a product under "Add all batches of a product…" and click **Add all**.
4. For each batch the **Physical count** starts equal to the system quantity. Change it to the number you actually counted. The **Variance** updates.
5. Click **Save as draft**. Nothing in stock changes yet.
6. Open the draft from the list. Review it, then click **Approve & adjust stock** (or delete the draft with **Delete draft**).

EXAMPLE (FICTIONAL DATA)

Batch MP-261020-B: system 20, counted 19, variance −1. After approval, one unit is removed from Saleable stock with an Adjustment movement.

EXPECTED RESULT

An approved count shows the posted adjustment for each batch and the approver's name and date.

WHAT CHANGES IN THE SYSTEM

- **A draft changes nothing.**
- On approval the adjustment is calculated against the **current** saleable stock at that moment (not the number at count time). It is posted as an Adjustment movement, saleable bucket only.
- Approval cannot be undone; approved counts cannot be deleted; drafts cannot be edited (delete and create again).

COMMON MISTAKES

- Counting damaged or expired units: reconciliation only covers the **saleable** bucket.
- Approving a count long after it was entered: the adjustment uses the stock *now*, so check the system quantity first.
- The same person can create and approve a count. Your business should decide who approves.

NEXT STEP

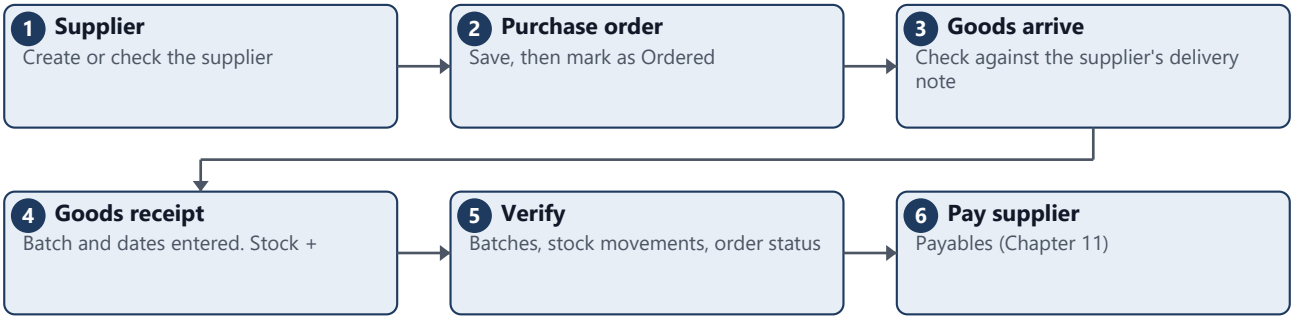

Inventory is complete. Return to Alerts to confirm nothing is flagged.

CHAPTER 7

Suppliers and Purchases

Buying stock: from the supplier record, through the purchase order, to receiving goods and paying the supplier.

IMPORTANT
Placing a purchase order does NOT add stock. A purchase order is only a request to the supplier. Stock goes up when you record a **Goods receipt** for the goods that really arrived. Saving, marking as ordered, editing, cancelling or deleting a purchase order never moves stock.

Suppliers

Where to find it: Sidebar → **Purchases** → **Suppliers**

PURPOSE
The directory of the companies you buy from, with GSTIN and contact details.

WHEN TO USE IT
Before you place the first order with a new supplier.

BEFORE YOU BEGIN
Permission to edit Purchases (Administrator and Warehouse by default).

STEPS
1. Click **Add supplier**.
2. Type the **Supplier name** (required). Choose the **State** (required).
3. Optional: **Contact person**, **Phone**, **Email**, **GSTIN** (15 characters, see the note), **Address**, **City**.
4. Leave **Active supplier** ticked. Click **Add supplier**.

EXAMPLE (FICTIONAL DATA)
Supplier “Shree Ganesh Foods”, state Karnataka, GSTIN 29ABCDE1234F1Z5 (an invented example), city Hubballi.

EXPECTED RESULT
The supplier appears in the list. The row menu has **View payables** (opens Accounts → Payables), **Edit** and **Delete**.

WHAT CHANGES IN THE SYSTEM
- Adds a master record. No stock or money changes.
- Inactive suppliers are hidden from the supplier list on new purchase orders.

COMMON MISTAKES

- A wrongly typed GSTIN. The system checks only the *format* (2 digits, 5 letters, 4 digits, 1 letter, 1 letter or digit, Z, 1 letter or digit), not whether it truly exists.
- Deleting a supplier that has orders, payments or batches: refused. Untick **Active** instead.

NEXT STEP

Purchase orders.

Purchase orders

Where to find it: Sidebar → **Purchases** → **Purchase orders**

PURPOSE

To record what you have asked a supplier to deliver, with rates and GST.

WHEN TO USE IT

Whenever you place an order with a supplier.

BEFORE YOU BEGIN

- An active **supplier**.
- Active **products**.

STEPS

1. Click **New purchase order**.
2. Under **Order details** choose the **Supplier** and the **Order date** (today by default). Optionally set **Expected delivery** and **Notes**.
3. Under **Products** click **Add product**. Choose the product; the **Rate** and **GST %** are filled from the product master. Enter the **Quantity** (in base units, for example Pieces). Change the rate if the supplier's price differs. A product can appear only once.
4. Check **Taxable value**, **GST** and **Total** at the bottom.
5. Click **Save as draft** to keep it for later, or **Save & mark ordered** to confirm it is placed. The order opens with a number such as PO-2026-0001.

EXAMPLE (FICTIONAL DATA)

Supplier Shree Ganesh Foods; MP-200 Masala Peanuts 200g; Qty 100 Pcs; Rate ₹40.00; GST 12%. Taxable ₹4,000.00, GST ₹480.00, Total **₹4,480.00**.

EXPECTED RESULT

A purchase order with status **Draft** or **Ordered**. Its detail page shows Ordered, Received and Pending quantities.

WHAT CHANGES IN THE SYSTEM

- **Only a document is stored.** Stock, batches and supplier balances do not change.
- Only **Ordered** (and Partially received) orders can be received. A Draft cannot.
- Status changes: Draft → Ordered by “Mark as ordered” or “Save & mark ordered”. Partially received and Received are set **automatically** by goods receipts. Draft or Ordered orders with nothing received can be **Cancelled**. Only Draft or Cancelled orders without receipts can be **deleted**.

COMMON MISTAKES

- Forgetting to mark the order as Ordered. It will not appear in Receive goods.
- Editing an Ordered order with **Save as draft**: it goes back to Draft.

- **Once anything has been received, the order can no longer be edited or cancelled**, and there is no way to close it short. Correct the rate *before* the first receipt. The receipt uses the order's rate.

NEXT STEP

Receive the goods.

Goods receipts (Receive goods)

Where to find it: Sidebar → **Purchases** → **Goods receipts** → **Receive goods**, or the **Receive goods** button on a purchase order

PURPOSE

To record goods that have actually arrived. This is the step that **adds stock** and creates the batches.

WHEN TO USE IT

When a delivery arrives. Receive what you really got, even if it is less than ordered.

BEFORE YOU BEGIN

- A purchase order with status **Ordered** or **Partially received**.
- The supplier's delivery note, with the supplier invoice number, batch numbers and manufacturing and expiry dates.

STEPS

1. Click **Receive goods**. Choose the **Purchase order**.
2. Set the **Receipt date** and type the **Supplier invoice no** (required on the screen).
3. For each product the screen shows "Ordered X · received Y · pending Z". Enter **Qty received** (it starts at the pending quantity; set **0** to skip a line). Enter the **Batch no**, **Mfg date** and **Expiry date**.
4. Click **Record receipt**. A green message says "Goods received. Stock has been added to inventory by batch."

EXAMPLE (FICTIONAL DATA)

Receive 80 of the 100 ordered: batch **MP-261014-A**, Mfg 8 Oct 2026, Expiry 8 Oct 2027, supplier invoice SF-2201. The goods receipt GRN-2026-0001 totals ₹3,584.00 (taxable ₹3,200.00 + GST ₹384.00).

EXPECTED RESULT

A goods receipt (GRN) opens. The order becomes **Partially received**: Ordered 100, Received 80, Pending 20.

WHAT CHANGES IN THE SYSTEM

- **Stock increases** by 80 in the saleable bucket (movement type Receipt).
- A batch is **created** (cost = the order's rate), or an existing batch with the same product and batch number is **topped up** (its expiry date must match).
- What you owe the supplier increases by the receipt total.
- The order status becomes Partially received, or Received when nothing is pending.

COMMON MISTAKES

- Receiving more than pending: "Cannot exceed pending (N)".
- Expiry not after the manufacturing date, or already expired on the receipt date.
- Reusing a batch number with a different expiry date: "Batch … already exists with a different expiry date."
- There is no rate field: the receipt always uses the purchase order rate. If the supplier's invoice has another rate, fix the order **before** the first receipt.
- Receipts cannot be edited, cancelled or deleted. Check batch numbers and dates carefully before saving.

NEXT STEP

Verify: Inventory → Batches & expiry and Stock movements.

Worked example: ordering 100 and receiving 80, then 20

Step	What you do	Result in the system
1	New purchase order: MP-200, 100 Pcs @ ₹40, GST 12%. Save & mark ordered.	PO-2026-0001, Ordered. Taxable ₹4,000.00 + GST ₹480.00 = ₹4,480.00. **Stock unchanged.**
2	Receive goods: 80 Pcs, batch MP-261014-A, Mfg 8 Oct 2026, Exp 8 Oct 2027.	GRN-2026-0001 (₹3,584.00). Batch created: 80 saleable. Order **Partially received**: ordered 100, received 80, pending 20 (80%). Stock +80.
3	Receive goods again: quantity starts at 20. Use a new batch MP-261020-B, Mfg 15 Oct 2026, Exp 15 Oct 2027.	GRN-2026-0002 (₹896.00: taxable ₹800.00 + GST ₹96.00). Second batch: 20 saleable. Order **Received**. Total stock 100. The two receipts total ₹4,480.00, the order total.
4	If you had typed 25 in step 3.	Refused: “Cannot exceed pending (20)”.
5	If you receive only 15 in step 3.	Order stays **Partially received** with 5 pending. It remains open for a later receipt.

> **TIP**
> **Same batch twice.** If the second delivery is from the same production lot, type the same batch number and the same expiry date. The system adds the units to the existing batch instead of creating a new one.

Supplier returns

Where to find it: Sidebar → **Purchases** → **Supplier returns**

PURPOSE

To send goods back to a supplier (damaged, expired or short-dated) and reduce what you owe.

WHEN TO USE IT

When you return goods to the supplier.

BEFORE YOU BEGIN

A batch supplied by that supplier, with stock on hand.

STEPS

1. Click **New supplier return**.
2. Choose the **Supplier**, the **Return date** and type the **Reason** (required on the screen).
3. Click **Add batch**. Choose the **Batch** (only batches from that supplier with stock), the **Stock type** (bucket) and the **Quantity**.
4. Check **Total credit**, then click **Record return**.

EXAMPLE (FICTIONAL DATA)

Return 5 damaged units of batch MP-261014-A (cost ₹40, GST 12%): credit ₹200.00 + ₹24.00 = ₹224.00.

EXPECTED RESULT

A return numbered SRT-2026-0001. The message says “Supplier return recorded. Stock and supplier balance updated.”

WHAT CHANGES IN THE SYSTEM

- **Stock reduces** in the chosen bucket.
- **What you owe the supplier reduces** by the total credit. GST uses the product's current GST rate.
- The purchase order is not changed (it is not reopened) and no credit-note document is created.

COMMON MISTAKES

- Returning more than the bucket holds, or from a batch that this supplier did not supply.

NEXT STEP

Accounts → Payables.

CHAPTER 8

Distributors and Distribution

Your customers (distributors and dealers), their prices and credit terms, and how goods leave your warehouse.

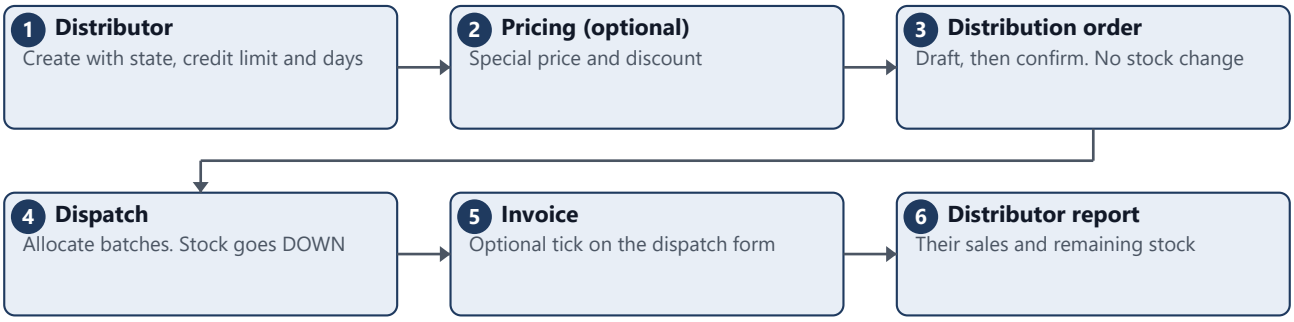

Three different things: dispatched, held and sold

It is very important to keep these apart:

Term	Meaning	Where it is recorded
Dispatched	Goods **you** sent to the distributor. Your stock goes down.	Dispatches. Automatic from the dispatch form.
Stock with the distributor	What the distributor still holds, **as reported by the distributor**.	Distributor stock → reports (entered by you from their report).
Distributor's actual sales	What the distributor sold to its own customers, **as reported by the distributor**.	Distributor stock → reports.

IMPORTANT

Dispatch is not a sale by the distributor. The system does **not** know what a distributor sold. It knows only what you dispatched, and what the distributor has told you in its reports. Where no report exists, the screens show "Not reported".

Distributors & dealers

Where to find it: Sidebar → **Distribution** → **Distributors & dealers**

PURPOSE

The customer directory: contact details, GSTIN, state, credit limit and credit days.

WHEN TO USE IT

Before taking the first order from a new distributor or dealer.

BEFORE YOU BEGIN

Permission to edit Distributors (Administrator and Sales by default).

STEPS

1. Click **Add distributor**.
2. Type the **Name** (required). Leave **Code** empty to get an automatic code such as D001.

3. Choose the **Type** (Distributor or Dealer) and the **State** (required). The State decides CGST + SGST or IGST on invoices.
4. Enter **Credit limit (₹)** (default 100,000; 0 means no limit warning) and **Credit days** (default 30; used for the invoice due date).
5. Optional: contact person, phone, email, GSTIN, address, city, payment terms. Leave **Active** ticked and click **Add distributor**.

EXAMPLE (FICTIONAL DATA)

Kaveri Distributors, Type Distributor, State Tamil Nadu, Credit limit ₹50,000, Credit days 30.

EXPECTED RESULT

The distributor appears in the list. Click its name to open the **profile** with tabs Overview, Pricing, Orders, Invoices and Stock.

WHAT CHANGES IN THE SYSTEM

- Adds a master record only.
- On the profile, **Outstanding balance** = invoices + debit notes − credit notes − all payments received. A bar shows how much of the credit limit is used.
- Type (Distributor or Dealer) is only a label; the rules are the same for both.

COMMON MISTAKES

- Choosing the wrong State. If it matches the company state, invoices carry CGST + SGST; if not, IGST.
- Only eleven states are offered in the State list. The company state is set in Settings.
- Deleting a distributor with any orders, invoices, payments or prices is refused. Untick **Active** instead. Inactive distributors cannot be chosen for new orders.

NEXT STEP

Pricing & terms, or a new order.

Pricing & terms

Where to find it: Sidebar → **Distribution** → **Pricing & terms**

PURPOSE

To give one distributor a special price and discount for a product.

WHEN TO USE IT

When a distributor has an agreed price different from the standard selling price.

BEFORE YOU BEGIN

A distributor and a product.

STEPS

1. Click **Add price**.
2. Choose the **Distributor** and **Product**.
3. Enter **Net price per unit (₹)** (before discount, excluding GST) and **Discount (%)**.
4. Optionally type **Commercial terms**, then save.

EXAMPLE (FICTIONAL DATA)

Kaveri Distributors, MP-200: price ₹55.00, discount 2%. Effective net price ₹53.90.

EXPECTED RESULT

The table shows Standard price, Special price, Discount and **Effective net** (price after discount).

WHAT CHANGES IN THE SYSTEM

- The price is used only as a **default** on new orders for that distributor. Existing orders keep their own rates.
- One price per distributor and product.

COMMON MISTAKES

- Entering a price that includes GST. Prices are always before GST.

NEXT STEP

Orders.

Distribution orders

Where to find it: Sidebar → **Distribution** → **Orders**

PURPOSE

To record what a distributor or dealer has ordered, before any goods are sent.

WHEN TO USE IT

When an order arrives.

BEFORE YOU BEGIN

- An **active distributor**.
- Active **products**.

STEPS

1. Click **New order**. Choose the **Distributor / dealer**, the **Order date** (not in the future) and optionally **Expected delivery** and **Notes**.
2. Click **Add product** (enabled after you choose a distributor). Choose the product. The **Rate**, **Disc %** and **GST** are filled from the special price or the product. Enter the **Qty** and change rate or discount if needed.
3. Check the **Credit check** card (current outstanding, this order, projected outstanding, credit limit) and the **Totals** card.
4. Click **Save as draft** (keep it for later) or **Save & confirm** (ready to dispatch).

EXAMPLE (FICTIONAL DATA)

Kaveri Distributors orders 60 Pcs of MP-200 at ₹55.00 with 2% discount. Taxable ₹3,234.00, IGST 12% ₹388.08, order total ₹3,622.08 (not rounded; the invoice is rounded to the rupee).

EXPECTED RESULT

An order ORD-2026-0001. A confirmed order can be dispatched.

WHAT CHANGES IN THE SYSTEM

- **No stock change.** Neither saving nor confirming an order reduces stock or reserves it.
- Statuses: Draft → Confirmed (by Confirm). **Partially dispatched** and **Dispatched** are set automatically by dispatches. A Draft or Confirmed order without dispatches can be Cancelled. Only Draft or Cancelled orders can be deleted.
- Credit limit: if the projected outstanding is above the limit and you press **Save & confirm**, a dialog "Credit limit exceeded" asks **Confirm anyway**. It is a **warning only**. It is not checked when you press Confirm on the list, at dispatch, or at invoicing, and the server does not block it.

COMMON MISTAKES

- The quantity warning "Quantity exceeds available stock" is also only a warning.
- Saving a Confirmed order with **Save as draft** moves it back to Draft.
- After the first dispatch the order can no longer be edited or cancelled.

NEXT STEP
Dispatch.

Dispatches (batch allocation)

Where to find it: Sidebar → **Distribution** → **Dispatches** → **New dispatch**, or **Dispatch** on a confirmed order

PURPOSE
To send goods out of the warehouse: choose the batches and quantities and **reduce stock**.

WHEN TO USE IT
When goods leave for a distributor.

BEFORE YOU BEGIN
- A **Confirmed** or Partially dispatched order.
- **Saleable, unexpired stock** (from goods receipts).

STEPS
1. Click **New dispatch** and choose the **Order**.
2. Check the **Dispatch date** (not in the future, not before the order date). Optionally fill **Vehicle no**, **Delivery document ref** and **Notes**.
3. Under **Batch allocation** click **Auto-allocate all**. The system picks batches with the **earliest expiry first**. Or choose batches and quantities by hand with **Add batch**. You may allocate less than the pending quantity for a partial dispatch.
4. Decide the box **Generate invoice after dispatch** (ticked by default; see the note below).
5. Click **Record dispatch**. A green “Dispatch recorded” message appears.

EXAMPLE (FICTIONAL DATA)
Order of 60 Pcs. Batch MP-261014-A has 80, batch MP-261020-B has 20. Auto-allocate takes all 60 from MP-261014-A (earliest expiry on the list). Batch A then holds 20 and B still holds 20.

EXPECTED RESULT
A dispatch DSP-2026-0001. The order becomes Dispatched (or Partially dispatched). The dispatch page has **Print delivery note**.

WHAT CHANGES IN THE SYSTEM
- **Stock decreases** by the dispatched quantity in each batch (movement type Dispatch).
- Over-dispatching (more than pending) is refused. Expired batches are refused. A batch with too few units is refused.
- No money entry is created unless an invoice is generated.
- **A dispatch cannot be edited, cancelled or deleted.** Check batches and quantities first.

COMMON MISTAKES
- Warehouse users leaving “Generate invoice after dispatch” ticked: the dispatch is saved, then the invoice step fails because that role cannot create invoices. Untick it.
- No batches in the list: there is no saleable, unexpired stock on that date. Receive goods first.
- Partial dispatch: the order stays Partially dispatched. Each dispatch gets its own invoice for its own quantities.

NEXT STEP
Invoice the dispatch (Chapter 9).

Distributor stock

Where to find it: Sidebar → **Distribution** → **Distributor stock**

PURPOSE

To compare what you dispatched with what each distributor reports selling and holding.

WHEN TO USE IT

Whenever a distributor sends its monthly sales and remaining-stock report.

BEFORE YOU BEGIN

Dispatches to the distributor. Reports are typed in by you from what the distributor tells you.

STEPS

1. Open **Distributor stock**. The tab **Dispatched vs reported** shows one row per distributor and product.
2. To enter one report click **Add report**: choose the Distributor, Product and month (**Period**), then enter **Reported sales**, **Remaining stock** and **Returned**, and click **Save report**. A report for the same month replaces the older one.
3. To enter many reports click **Import CSV**, use **Download template**, fill it in and paste or choose the file, then click **Import**. The columns are distributorCode, sku, period (YYYY-MM), reportedSales, remainingStock, returned.
4. Open the tab **Reports received** to see them all; use **Delete** on a row to remove a wrong report.

EXAMPLE (FICTIONAL DATA)

Kaveri Distributors, MP-200: dispatched 60, reported sales 35, reported remaining 20. Unreconciled = 60 − 0 − 35 − 20 = **5** units not explained.

EXPECTED RESULT

The **Unreconciled** badge is green at 0 and amber otherwise. “Not reported” means no report has been entered.

WHAT CHANGES IN THE SYSTEM

- Reports are **information only**. They do not move stock or create money entries.
- Unreconciled = dispatched − returned to us − total reported sales − latest reported remaining stock. A non-zero figure can mean a missing report, goods still in transit or a reporting error.

COMMON MISTAKES

- Treating dispatched quantity as sales.
- Import rows with an unknown distributor code or SKU are skipped and listed with the row number; other rows are still imported.
- The “Returned” figure typed in a report is stored but is not used in the Unreconciled figure.

NEXT STEP

Sales invoices (Chapter 9).

CHAPTER 9

Sales and Invoices

GST tax invoices, credit and debit notes, and goods returned by distributors.

> **IMPORTANT**
> **Does creating an invoice reduce stock?** No. Stock is reduced by the **dispatch**. An invoice records the sale and the amount the distributor owes. An invoice is always created **from a dispatch**, one invoice per dispatch.

When is an invoice created?

- **On the dispatch form**: the box **Generate invoice after dispatch**, ticked by default. The invoice is dated the dispatch date.
- **From the Dispatches list or page**: row menu or button **Generate invoice** for a dispatch marked "Not invoiced". It is dated today.
- **From the Invoices page**: **Generate invoice**, then choose the dispatch and the invoice date.
- The system never creates an invoice by itself in any other way. A dispatch with the badge "Not invoiced" has no invoice yet.

Invoices

Where to find it: Sidebar → **Sales** → **Invoices**

PURPOSE

The list of all GST tax invoices, with payment status, and the screen to create and print them.

WHEN TO USE IT

To bill a distributor for goods dispatched, and to check what is paid or overdue.

BEFORE YOU BEGIN

- A **dispatch** that has not been invoiced.
- The company state set correctly in Settings, and the distributor's state, so the right GST type is used.

STEPS

1. Open **Sales** → **Invoices** and click **Generate invoice**.
2. Choose the **Dispatch** (the list shows dispatch number, distributor and date).
3. Set the **Invoice date**: not before the dispatch date and not in the future.
4. Click **Generate invoice**. The invoice opens with a message "Invoice generated".

EXAMPLE (FICTIONAL DATA)

Dispatch DSP-2026-0001 (60 Pcs of MP-200 to Kaveri Distributors, Tamil Nadu), dated 23 Oct 2026. Invoice INV-2026-0001: taxable ₹3,234.00, IGST ₹388.08, round-off −₹0.08, total **₹3,622.00**, due 22 Nov 2026 (30 credit days).

EXPECTED RESULT

The invoice shows each product line with HSN, batch, quantity, rate, discount, taxable value, GST and amount, the totals, and the amount in words.

WHAT CHANGES IN THE SYSTEM

- **Stock is not changed** (it was reduced by the dispatch).

- **The distributor's balance and ledger increase** by the invoice total. The invoice itself is the amount owed; there is no separate receivable record.
- Rates, discount and GST come from the order. The due date is invoice date + the distributor's credit days.
- **Invoices cannot be edited, cancelled or deleted.** Corrections are made with credit or debit notes and returns.

COMMON MISTAKES

- "Every dispatch has already been invoiced." The dispatch already has its invoice.
- An invoice date in the future is refused.
- Not finding an invoice: the list opens on **Last 6 months**; widen the Period.

NEXT STEP

Record the payment (Chapter 11).

The invoice list

- Columns: Invoice no, Date, Distributor, Taxable, GST, Total, Paid, Outstanding, Due date and Status (Unpaid, Partial, Paid, plus a red "Overdue Nd" badge).
- Filters: Period, All statuses (Unpaid, Partially paid, Paid, Overdue) and All distributors. A summary bar shows the number of invoices, the Invoiced total and the Outstanding total.
- Row menu: **View**, **Record payment**, **Return goods** and **Print**.
- **Status:** Paid when nothing is outstanding; Partial when a payment or credit note has been applied but a balance remains; Unpaid otherwise. **Overdue** means something is outstanding and the due date has passed.

Printing or saving an invoice as PDF

1. Open the invoice (click its number).
2. Click **Print / Save as PDF**. The browser's print window opens.
3. To make a PDF choose **Save as PDF** as the printer and click Save. To print, choose your printer.
4. The printed page contains the company details, "Tax Invoice", bill-to details, place of supply, the line table, totals, amount in words, terms and signature lines. The menus and side panels are not printed.

The side panels on screen (not printed) show the **Payment summary** (invoice total, payments received, credit notes, debit notes, outstanding), **Payments applied** and **Returns & notes**.

Sales returns

Where to find it: Sidebar → **Sales** → **Sales returns** → **Record return**, or **Return goods** on an invoice

PURPOSE

To record goods that a distributor sends back, and decide where each returned unit goes: saleable, damaged, expired or needs inspection.

WHEN TO USE IT

When returned goods arrive in your warehouse.

BEFORE YOU BEGIN

- An **invoice** with units still returnable.

STEPS

1. Click **Record return**. Choose the **Distributor**, then the **Invoice**.

2. Set the **Return date**, choose the **Reason** (Expired, Near expiry, Damaged, Wrong item, Quality issue, Other) and add notes if you like.
3. For each invoice line enter the **Return qty** (0 skips the line) and choose the **classification**: **Saleable**, **Damaged**, **Expired** or **Needs inspection**.
4. Keep **Issue credit note for returned goods** ticked (default) if the distributor should be credited.
5. Click **Record return**.

EXAMPLE (FICTIONAL DATA)

Kaveri returns 5 of the 60 Pcs as damaged. Credit note CN-2026-0001: 5 × ₹55.00 = 275.00, less 2% = 269.50 taxable, IGST 12% = 32.34, total **₹301.84**.

EXPECTED RESULT

A return RET-2026-0001 and, if ticked, a credit note. The return shows an effect text for each line, for example "Held as damaged stock — not sellable."

WHAT CHANGES IN THE SYSTEM

- **Stock increases** in the bucket you chose. Only **Saleable** returns go back to sellable stock. Damaged, Expired and Needs inspection are held separately.
- The credit note reduces what the distributor owes (invoice outstanding and ledger balance).
- A return cannot exceed the quantity invoiced (all returns together).
- **Needs inspection:** open the return and click **Decide disposition** on the line. Choose Saleable, Damaged or Expired and type an inspection note. The units move out of inspection. This is **final** and moves the whole line.

COMMON MISTAKES

- Leaving the credit-note box unticked: no credit is given, and a later manual note will not be linked to the return.
- The credit note for a partial return is for the exact value of the goods. When a return completes the **whole** invoice, the invoice's round-off is carried on the last credit note so credits equal the invoice total exactly.
- Warehouse users may see the **Decide disposition** button but the server needs Sales edit permission. Ask Accounts or Sales staff to record the decision.

NEXT STEP

Check Inventory → Stock overview and Accounts → Receivables.

Credit & debit notes

Where to find it: Sidebar → **Sales** → **Credit & debit notes**, or **Issue credit note** on an invoice

PURPOSE

Credit note: reduces what a distributor owes (a price correction, discount or returned goods). **Debit note**: increases it (an extra charge).

WHEN TO USE IT

For adjustments that are not an ordinary return. Returns make their own credit notes automatically.

BEFORE YOU BEGIN

- A distributor. Optionally an invoice of that distributor.

STEPS

1. Click **New note**.
2. Choose the **Type** (Credit note or Debit note), the **Date** and the **Distributor**.

3. Optionally choose **Against invoice** (lists that distributor's invoices).
4. Enter **Amount before GST (₹)**, the **GST rate** and the **Reason** (required). A preview shows the note total.
5. Click **Issue note**.

EXAMPLE (FICTIONAL DATA)

Credit note for a rate difference: amount before GST ₹100.00, GST 18% → tax ₹18.00, total ₹118.00.

EXPECTED RESULT

A note CN-2026-0002 or DN-2026-0001. Click a row to see it or print it.

WHAT CHANGES IN THE SYSTEM

- With a linked invoice, the invoice's outstanding falls (credit) or rises (debit). Without an invoice only the distributor's overall balance and ledger change.
- Notes **do not touch stock**. They cannot be edited or deleted. Manual notes are not rounded to the rupee.
- There is no check that a manual credit note stays within the invoice value.

COMMON MISTAKES

- Mixing up the types. Credit = lowers the balance, Debit = raises it.
- Using a credit note to record goods coming back. Use a Sales return so that stock is updated too.

NEXT STEP

Accounts → Distributor ledger to see the effect.

CHAPTER 10

GST explained

How the system calculates tax on orders and invoices, in plain language with numbers.

> **WARNING**
> **This is how the system works, not tax advice.** The tax treatment of a real transaction depends on the facts and on the GST rules that apply. Always confirm GST rates, HSN codes and treatment with your accountant. The system does **not** file GST returns, create e-invoices or e-way bills.

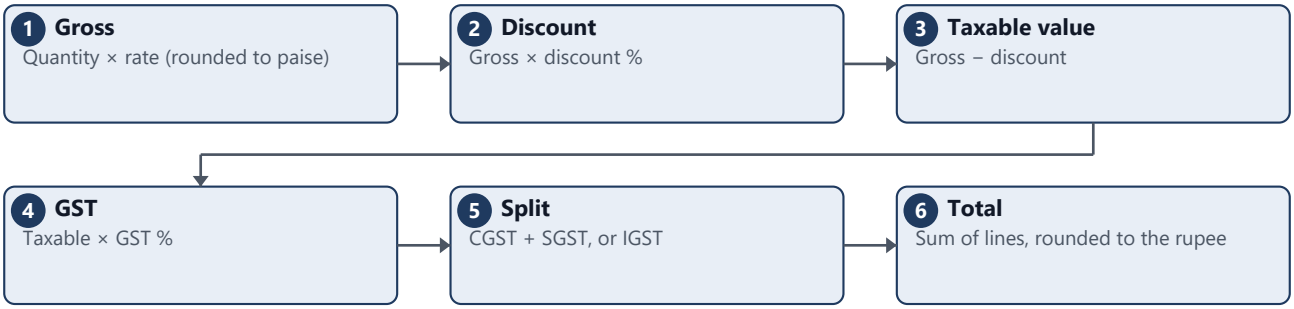

The ideas

- **Taxable value** is the price of the goods **before** tax, after any discount.
- **GST** is the tax added on top of the taxable value at the product's GST rate (0%, 5%, 12%, 18% or 28% in this system).
- **CGST and SGST** are the two halves of GST charged when the seller and the buyer are in the **same state**. Half goes to the central government and half to the state.
- **IGST** is the whole GST charged when the buyer is in a **different state**.
- **Round-off**: the invoice grand total is rounded to the nearest whole rupee; the small difference is shown as the round-off line (it can be negative).

How the system decides CGST/SGST or IGST

It compares two fields: the **State** in **Settings** (your company's state) and the **State** on the **distributor** record. If they are the same, the invoice shows **CGST + SGST**. If they differ, it shows **IGST**. The distributor's GSTIN is not used for this decision, so keep the State field correct. For a credit or debit note linked to an invoice, the same type as the invoice is used.

How a line is calculated

- **Prices are exclusive of GST.** The selling price, special price and order rate are all before GST. There is no option to enter tax-inclusive prices.
- The **discount is applied before tax**, so a discount also reduces the GST.
- Tax is rounded to paise **per line**. The two lines are then added together. When tax is split, CGST is half (rounded) and SGST gets the remainder.
- Orders show an **unrounded** total. The **invoice** total is rounded to the rupee.

Worked examples

Example 1: ₹1,000 at 18%, same state (CGST + SGST)

Taxable value	GST 18%	CGST 9%	SGST 9%	Subtotal	Round-off	Invoice total
₹1,000.00	₹180.00	₹90.00	₹90.00	₹1,180.00	₹0.00	**₹1,180.00**

Example 2: the same sale to a different state (IGST)

Taxable value	GST 18%	IGST 18%	Subtotal	Round-off	Invoice total
₹1,000.00	₹180.00	₹180.00	₹1,180.00	₹0.00	**₹1,180.00**

Example 3: with a discount and rounding (the tutorial invoice)

60 pieces at ₹55.00 with a 2% discount, GST 12%, sold to a distributor in another state:

Step	Working	Amount
Gross	60 × ₹55.00	₹3,300.00
Discount 2%	₹3,300.00 × 2%	− ₹66.00
Taxable value	₹3,300.00 − ₹66.00	₹3,234.00
IGST 12%	₹3,234.00 × 12%	₹388.08
Subtotal	₹3,234.00 + ₹388.08	₹3,622.08
Round-off	rounded to the rupee	− ₹0.08
Invoice total		**₹3,622.00**

Example 4: a larger discount, same state

10 packs at ₹250.00, 10% discount, GST 18%: gross ₹2,500.00; discount ₹250.00; taxable ₹2,250.00; GST ₹405.00 = CGST ₹202.50 + SGST ₹202.50; total **₹2,655.00**.

Where GST appears in the system

Where	What you see
Product master	The GST rate (and optional HSN code) for each product.
Purchase orders and goods receipts	Taxable value, GST and total. For purchases only the totals are shown; they are not rounded to the rupee.
Distribution orders	Supply type (intra-state or inter-state), Taxable value, CGST + SGST or IGST, and the order total.
Invoices	Line GST, CGST + SGST or IGST, round-off, grand total and amount in words.
Credit and debit notes	Taxable value, GST and total.
Reports → Purchase & sales registers	Tax split per invoice and per goods receipt.
Reports → GST summary	Output GST on sales by rate and by month, credit and debit note GST, and input GST on purchases.

NOTE
The GST summary is a **transaction summary** to help your accountant. It does not prepare or file returns, does not net input tax against output tax, and does not support e-invoicing or e-way bills.

CHAPTER 11

Accounts

Money you are owed, money you have received, money you owe suppliers, and office expenses.

> **NOTE**
> **This is operational record-keeping, not full accounting.** The system tracks invoices, receipts, supplier balances and expenses. It does not keep double-entry books, a general ledger or a profit-and-loss statement. Use it alongside your accountant's books.

How money flows

Event	Effect on what a distributor owes you	Effect on what you owe a supplier
Invoice created	Increases by the invoice total	—
Payment received	Decreases by the full payment (even before allocation)	—
Credit note / sales return credit	Decreases	—
Debit note	Increases	—
Goods receipt	—	Increases by the receipt total
Supplier return	—	Decreases
Supplier payment	—	Decreases

Recording a payment versus allocating it

These are two ideas that the system treats separately:

- **Recording a payment** saves the money you received: who paid, when, how much and how. It immediately lowers the distributor's overall **balance** and ledger.
- **Allocating a payment** says which invoice(s) the money pays. Only allocation reduces an **invoice's** outstanding amount and changes its status to Partial or Paid.
- Money that has been recorded but not allocated is "**kept on account**". It shows as "On account" on the payments list.
- You normally record and allocate in the same step on the payment form. You can allocate the rest later from the receipt (**Allocate remaining**).

Receivables

Where to find it: Sidebar → **Accounts** → **Receivables**

PURPOSE

To see what each distributor owes, how close they are to their credit limit, and which invoices are due or overdue.

WHEN TO USE IT

Daily, to plan collections.

BEFORE YOU BEGIN

Invoices (and payments, if any).

STEPS

1. Open **Receivables**. The cards show **Total outstanding**, **Overdue**, **Unallocated receipts** and **Over credit limit**.
2. Tab **Distributor balances**: one row per distributor with Invoiced, Credit notes, Debit notes, Received, **Balance**, Overdue, Credit limit used and Last payment. Use the tick boxes **Overdue only** and **Over limit only**.
3. Tab **Due & overdue invoices**: each open invoice with its due date and "Nd overdue" or "Due in Nd". The filter offers All open, Overdue and Due in next 7 days.
4. Use the row menu: **View ledger**, **Record payment**, **View invoices** (or **View invoice**).

EXAMPLE (FICTIONAL DATA)

Kaveri Distributors: Invoiced ₹3,622.00, Received ₹2,000.00, Credit notes ₹301.84, Balance ₹1,320.16.

EXPECTED RESULT

A negative balance is shown in green: the distributor has paid in advance.

WHAT CHANGES IN THE SYSTEM

- Nothing changes. It is a read-only summary.
- **Balance** = invoices + debit notes − credit notes − **all** payments received (including unallocated ones). **Invoice outstanding** and **Overdue** change only when a payment is allocated. So "Total outstanding" can be lower than the sum of open invoices until on-account money is allocated.

COMMON MISTAKES

- Not allocating payments: the invoice stays Unpaid or overdue although the balance is lower. Allocate the payment.
- "Total outstanding" adds only positive balances; advances are not subtracted.

NEXT STEP

Record a payment.

Payments received and Record payment

Where to find it: Sidebar → **Accounts** → **Payments received** → **Record payment**, or **Record payment** on a receivables or invoice row

PURPOSE

To save money received from a distributor and apply it to invoices.

WHEN TO USE IT

As soon as you receive cash, a cheque, a bank transfer or a UPI payment.

BEFORE YOU BEGIN

- An active **distributor**.
- For allocation, open **invoices** of that distributor.

STEPS

1. Click **Record payment**. Choose the **Distributor / dealer**.
2. Set the **Payment date** (the picker stops at today) and the **Amount received (₹)**.
3. Choose the **Mode** (Cash, Bank transfer, UPI, Cheque, Other). The reference label changes: "UTR / transaction reference", "UPI reference" or "Cheque number". The reference and notes are optional.

4. Under **Allocate to invoices** click **Auto-allocate** (oldest due invoice first), or type an amount against each invoice. When you come from an invoice row, that invoice is already chosen.
5. Check the three tiles: **Amount**, **Allocated** and **Kept on account**. Click **Record payment**. A green "Payment recorded" message appears and the **receipt** opens.

EXAMPLE (FICTIONAL DATA)

Kaveri pays ₹2,000.00 by bank transfer, reference UTR2610300001 (invented). Allocate ₹2,000.00 to INV-2026-0001. Receipt RCT-2026-0001.

EXPECTED RESULT

The receipt shows the amount, the invoices it was applied to and any amount on account. Click **Print / Save as PDF** to print it.

WHAT CHANGES IN THE SYSTEM

- The payment lowers the distributor's balance and appears in the ledger.
- Allocation lowers the chosen invoices' outstanding and updates their status.
- **Payments and allocations cannot be edited, cancelled or deleted.** Check the amount and distributor before saving.

COMMON MISTAKES

- Allocating more than an invoice's outstanding: "Amount for INV-… exceeds its outstanding ₹…".
- Allocating more than the payment: the button is disabled while "Kept on account" is negative.
- Leaving all allocation boxes blank: the full amount stays on account (this is allowed).
- To apply money that is on account later, open the receipt and click **Allocate remaining**, or use **Allocate to invoices** on the list row.

NEXT STEP

Check the Distributor ledger.

Full and partial payments: an example

Step	Payment and allocation	Invoice INV-2026-0001 (₹3,622.00)	Distributor balance
Start	—	Unpaid, outstanding ₹3,622.00	₹3,622.00
1	Pay ₹2,000.00, allocate ₹2,000.00	**Partial**, outstanding ₹1,622.00	₹1,622.00
2	Pay ₹1,622.00, allocate ₹1,622.00	**Paid**, outstanding ₹0.00	₹0.00
Variation	Pay ₹5,000.00 but allocate only ₹3,622.00	Paid. ₹1,378.00 is **on account**	−₹1,378.00 (advance, shown green)

Distributor ledger

Where to find it: Sidebar → **Accounts** → **Distributor ledger**, or **Ledger** on a distributor

PURPOSE

The full statement of a distributor: every invoice, payment and note with a running balance.

WHEN TO USE IT

To answer "what do they owe and why?", or before a meeting with the distributor.

BEFORE YOU BEGIN

A distributor with transactions.

STEPS

1. Open **Distributor ledger** and choose a **Distributor / dealer** (inactive ones are included).
2. Choose the **Period**. Earlier entries are combined into one "Opening balance" row.
3. Read the columns Date, Type, Reference, Description, Debit, Credit and Balance. Use **Print** or **Export CSV**.

EXAMPLE (FICTIONAL DATA)

Invoice debit ₹3,622.00 → payment credit ₹2,000.00 → credit note ₹301.84 → balance ₹1,320.16.

EXPECTED RESULT

The four cards show Closing balance, Credit limit (with percent used), Overdue and Last payment.

WHAT CHANGES IN THE SYSTEM

- Read-only. A positive balance means the distributor owes you. The final balance equals the Balance column on Receivables.
- A payment is shown as one credit for its full amount on its date; allocating it later changes nothing in the ledger.

COMMON MISTAKES

- Choosing a Period that starts after the first invoice: the opening row carries the earlier balance.

NEXT STEP

Payables, for the supplier side.

Payables (supplier payments)

Where to find it: Sidebar → **Accounts** → **Payables**

PURPOSE

To see what you owe each supplier and to record payments to them.

WHEN TO USE IT

When you pay a supplier, and when planning payments.

BEFORE YOU BEGIN

Goods receipts (what you owe). Permission to edit Payables (Administrator and Accounts).

STEPS

1. Open **Payables**. Cards: **Total payable**, **Paid this month**, **Suppliers with balance**.
2. Tab **Supplier outstanding** shows Purchases, Returns, Paid and **Outstanding** for each supplier.
3. Click **Record payment** (or the row menu). Choose the **Supplier**, the **Date**, the **Amount (₹)** (suggested as the outstanding amount), the **Mode**, and optional reference and notes. Click **Record payment**.
4. Tab **Payments made** lists all supplier payments (SPY numbers).

EXAMPLE (FICTIONAL DATA)

Shree Ganesh Foods: purchases ₹4,480.00 − returns ₹0.00 − paid ₹4,480.00 = outstanding ₹0.00.

EXPECTED RESULT

A message "Supplier payment recorded". A payment above the balance shows a warning and the excess is held as an advance.

WHAT CHANGES IN THE SYSTEM

- **Outstanding = goods receipt totals − supplier return totals − payments** for each supplier.
- It is a simple supplier-level balance. Payments are **not** allocated to individual receipts or orders.

- Supplier payments cannot be edited or deleted. They do not change stock.

COMMON MISTAKES

- Looking for a purchase bill status. There is none; only the supplier balance.

NEXT STEP

Office expenses.

Office expenses

Where to find it: Sidebar → **Accounts** → **Office expenses**

PURPOSE

To record running costs such as rent, electricity and stationery.

WHEN TO USE IT

When an expense is paid.

BEFORE YOU BEGIN

- At least one **expense category**. Permission to edit Expenses (Administrator and Accounts).

STEPS

1. Click **Manage categories** and add categories (type a name and click **Add**; the pencil renames, the bin deletes an unused one).
2. Click **Add expense**. Enter the **Date**, choose the **Category**, type the **Payee** (required), the **Amount (₹)**, the **Payment mode** and an optional **Description**.
3. Click **Add expense**. A message "Expense added" appears.
4. Edit or delete with the row menu **…**.

EXAMPLE (FICTIONAL DATA)

Category "Electricity", payee "City Power Board" (invented), ₹4,200.00, bank transfer. Number EXP-2026-0001.

EXPECTED RESULT

The expense appears in the list. The footer shows the count and total for the filtered period.

WHAT CHANGES IN THE SYSTEM

- Expenses feed the Income & expense summary only. They do not touch invoices, payables or ledgers.
- Unlike other records, expenses **can be edited and deleted** (delete asks for confirmation). A category with expenses cannot be deleted.

COMMON MISTAKES

- Entering a wrong date: the expense date has no future-date check, so check it yourself.

NEXT STEP

Income & expense summary.

Income & expense summary

Where to find it: Sidebar → **Accounts** → **Income & expense**

PURPOSE

A simple operational summary of sales, purchases and expenses for a period.

WHEN TO USE IT

At month end, for a quick view of how the business is doing.

BEFORE YOU BEGIN

Invoices, goods receipts and expenses in the period. It uses the **Expenses** permission.

STEPS

1. Open the page. It shows **This month** first (the Period drop-down may still say “Last 6 months”; choose the period you want).
2. Read the cards: Net income, Net purchases, Total expenses, **Operating result**, Collections received and Supplier payments.
3. Read the panels **Income** and **Purchases**, the chart and the table **Expenses by category**.

EXAMPLE (FICTIONAL DATA)

Taxable sales ₹3,234.00 − credit notes ₹269.50 = net income ₹2,964.50. Purchases ₹4,000.00. Expenses ₹4,200.00. Operating result = 2,964.50 − 4,000.00 − 4,200.00 = −₹5,235.50.

EXPECTED RESULT

A red result means purchases plus expenses were larger than income for the period.

WHAT CHANGES IN THE SYSTEM

- Read-only. All amounts are **before GST**.
- Income = invoices − credit notes + debit notes. Purchases = goods received − supplier returns. Operating result = income − purchases − expenses.
- It uses **purchases**, not the cost of goods sold, so stock bought but not yet sold lowers the result. Collections and supplier payments are shown for information and are not part of the result.

COMMON MISTAKES

- Treating the result as profit. The page itself says it is not a profit-and-loss statement.

NEXT STEP

Reports.

CHAPTER 12

Reports and exports

Six reports for sales, brands, products, distributors, registers and GST, and how to save any table to Excel.

How all reports work

- Open any report under **Reports** in the sidebar. At the top choose the **Period** (This month, Last month, Last 90 days, Last 6 months, All time or Custom range). Everything on the page, except where noted, uses that period.
- Each report has cards (KPIs), usually a chart, and a table. Use the search box and sorting as on any list.
- Reports are read-only. All role views are allowed by default.
- **Revenue** in the reports is the taxable value (before GST) after line discounts, **net of sales returns**. **Cost** is the quantity multiplied by the batch cost recorded on the invoice line. Returned goods give back their cost only if they were classified **Saleable**; damaged, expired and inspection returns reduce revenue but keep the cost (a loss). Margin = revenue − cost. Margin % = margin ÷ revenue. Operating expenses are not included.

How to export to Excel

1. Open the list or report you want and set the search, filters and **Period** so that only the rows you need are shown.
2. Click **Export CSV** above the table. A file such as *products.csv* is downloaded by your browser. (The button is disabled when there are no rows.)
3. Open the file in Excel. The export contains **all** rows matching your search and filters, not only the current page, in the order you sorted them.

- The file is UTF-8 so the ₹ sign and other characters show correctly in Excel.
- **Dates** such as 2026-10-23 are written as **text** cells. This stops Excel from showing "####" when a column is narrow. They stay in year-month-day order, which sorts correctly, but they are text, not true Excel dates.
- Money and quantities are written as plain numbers without the ₹ sign or thousands separators.
- Columns that hold only buttons or menus are not exported.

> **TIP**
> To use a date column in Excel date calculations, select the column, choose **Data → Text to Columns → Finish** to convert the text into real dates.

Sales & profitability

Where to find it: Sidebar → **Reports** → **Sales & profitability**

PURPOSE

Revenue, cost of goods and estimated margin for each invoice.

WHEN TO USE IT

To see which sales earned money.

BEFORE YOU BEGIN

Invoices, goods receipts or payments dated in the period.

STEPS

1. Open the report and choose the **Period**.
2. Read the cards, then the chart and table.
3. Click **Export CSV** to save the table.

EXAMPLE (FICTIONAL DATA)

Example: invoice INV-2026-0001: revenue ₹3,234.00 − returns ₹269.50 = ₹2,964.50; cost 60 × ₹40 = ₹2,400.00 (the damaged return does not give cost back); margin ₹564.50 (19.0%). A return in a later period shows as a row with negative revenue. **Decision:** raise prices or reduce discounts on lines with low margin.

EXPECTED RESULT

Cards: Revenue, Cost of goods, Estimated margin, Margin %. A chart shows the monthly trend. Table columns: Invoice, Date, Distributor, Revenue, Cost, Margin, Margin %.

WHAT CHANGES IN THE SYSTEM

Nothing changes; reports only read data.

COMMON MISTAKES

- Forgetting the Period. “No sales in this period” usually means the period is too narrow.
- Reading the figures as including GST. They are before GST unless stated.

NEXT STEP

Use the figures for decisions as described under the example.

Brand-wise report

Where to find it: Sidebar → **Reports** → **Brand-wise**

PURPOSE

Sales, margin and stock by brand, own brands against external brands.

WHEN TO USE IT

To compare brands.

BEFORE YOU BEGIN

Invoices, goods receipts or payments dated in the period.

STEPS

1. Open the report and choose the **Period**.
2. Read the cards, then the chart and table.
3. Click **Export CSV** to save the table.

EXAMPLE (FICTIONAL DATA)

Example: Greenleaf (Own brand) has the highest revenue share. **Decision:** decide which brands to stock more of.

EXPECTED RESULT

Cards: Total revenue, Own brands (% of revenue), External brands (%), Stock value. Table columns: Brand, Type, Qty sold, Revenue, Cost, Margin, Margin %, Stock qty, Stock value. **Stock qty and value are today's stock, not limited to the period.**

WHAT CHANGES IN THE SYSTEM

Nothing changes; reports only read data.

COMMON MISTAKES

- Forgetting the Period. “No sales in this period” usually means the period is too narrow.
- Reading the figures as including GST. They are before GST unless stated.

NEXT STEP

Use the figures for decisions as described under the example.

Product performance

Where to find it: Sidebar → **Reports** → **Product performance**

PURPOSE

Finds high-selling, slow-moving and low-performing products.

WHEN TO USE IT

Before reordering stock or dropping a product.

BEFORE YOU BEGIN

Invoices, goods receipts or payments dated in the period.

STEPS

1. Open the report and choose the **Period**.
2. Read the cards, then the chart and table.
3. Click **Export CSV** to save the table.

EXAMPLE (FICTIONAL DATA)

Example: a product with stock on hand but no sales is Low-performing. **Decision:** stop reordering it or offer a promotion.

EXPECTED RESULT

Cards: Four clickable tiles: High-selling, Average, Slow-moving, Low-performing (click to filter). Table columns: SKU, Product, Brand, Qty sold, Revenue, Margin, Stock on hand, Last sale, Performance. Only **active** products are listed. The classes are relative: the top quarter of sellers (by revenue) is High-selling, the bottom 40% of sellers is Slow-moving, products with no sales in the period are Low-performing.

WHAT CHANGES IN THE SYSTEM

Nothing changes; reports only read data.

COMMON MISTAKES

- Forgetting the Period. “No sales in this period” usually means the period is too narrow.
- Reading the figures as including GST. They are before GST unless stated.

NEXT STEP

Use the figures for decisions as described under the example.

Distributor performance

Where to find it: Sidebar → **Reports** → **Distributor performance**

PURPOSE

Sales, collections, outstanding balances and returns by distributor and dealer.

WHEN TO USE IT

To decide who to support or chase.

BEFORE YOU BEGIN

Invoices, goods receipts or payments dated in the period.

STEPS

1. Open the report and choose the **Period**.
2. Read the cards, then the chart and table.
3. Click **Export CSV** to save the table.

EXAMPLE (FICTIONAL DATA)

Example: a distributor with high sales but high return % needs a quality discussion.

EXPECTED RESULT

Cards: Sales (taxable), Collected, Outstanding now, Returns (% of sales). Table columns: Distributor, Type, Invoices, Sales, Invoiced total, Collected, Outstanding now, Returns, Return %, Reported sales (units). **Sales are what you invoiced, not what the distributor sold on.** “Reported sales” appear only where reports were entered. Outstanding is today's balance.

WHAT CHANGES IN THE SYSTEM

Nothing changes; reports only read data.

COMMON MISTAKES

- Forgetting the Period. “No sales in this period” usually means the period is too narrow.
- Reading the figures as including GST. They are before GST unless stated.

NEXT STEP

Use the figures for decisions as described under the example.

Purchase & sales registers

Where to find it: Sidebar → **Reports** → **Purchase & sales registers**

PURPOSE

Chronological registers of invoices and goods receipts with the tax split.

WHEN TO USE IT

For your accountant, and to check taxes by document.

BEFORE YOU BEGIN

Invoices, goods receipts or payments dated in the period.

STEPS

1. Open the report and choose the **Period**.
2. Read the cards, then the chart and table.
3. Click **Export CSV** to save the table.

EXAMPLE (FICTIONAL DATA)

Example: export the sales register for October and give it to your accountant.

EXPECTED RESULT

Cards: Sales (taxable), Output GST, Purchases (taxable), Input GST. Tabs: Sales register and Purchase register. Table columns: Sales: Invoice, Date, Distributor, GSTIN, Taxable, CGST, SGST, IGST, Round-off, Total. Purchases: GRN, Date, Supplier, Supplier invoice, GSTIN, Taxable, CGST, SGST, IGST, Total. A totals bar sums the filtered rows. The purchase register does not subtract supplier returns.

WHAT CHANGES IN THE SYSTEM

Nothing changes; reports only read data.

COMMON MISTAKES

- Forgetting the Period. “No sales in this period” usually means the period is too narrow.
- Reading the figures as including GST. They are before GST unless stated.

NEXT STEP

Use the figures for decisions as described under the example.

GST summary

Where to find it: Sidebar → **Reports** → **GST summary**

PURPOSE

Taxable values and GST on sales, notes and purchases for the period.

WHEN TO USE IT

At month end, before talking to your accountant.

BEFORE YOU BEGIN

Invoices, goods receipts or payments dated in the period.

STEPS

1. Open the report and choose the **Period**.
2. Read the cards, then the chart and table.
3. Click **Export CSV** to save the table.

EXAMPLE (FICTIONAL DATA)

Example: October output GST ₹388.08 (IGST on INV-2026-0001) less credit-note GST ₹32.34 = net output GST ₹355.74.

EXPECTED RESULT

Cards: Taxable sales, Output GST collected (CGST/SGST/IGST), Less: credit-note GST, Plus: debit-note GST, Net output GST, Input GST on purchases. Table columns: “By GST rate (sales)”: GST rate, Taxable value, CGST, SGST, IGST, Total GST. “By month (sales)”: Month, Taxable value, GST collected. This is a transaction summary only; return filing, e-invoicing and e-way bills are not included.

WHAT CHANGES IN THE SYSTEM

Nothing changes; reports only read data.

COMMON MISTAKES

- Forgetting the Period. “No sales in this period” usually means the period is too narrow.
- Reading the figures as including GST. They are before GST unless stated.

NEXT STEP

Use the figures for decisions as described under the example.

CHAPTER 13

Administration

Users, roles, audit trail and settings. These screens are for administrators only by default.

> **NOTE**
> Administration is hidden from every role except Administrator unless an administrator grants it. Do not share an administrator account. Never write passwords in this manual or on shared notes.

Users

Where to find it: Sidebar → **Administration** → **Users**

PURPOSE

To create accounts for your staff and decide who can sign in.

WHEN TO USE IT

When someone joins, changes role or leaves.

BEFORE YOU BEGIN

Administrator access.

STEPS

1. Click **Add user**.
2. Enter the **Full name**, the **Email** (it is the sign-in name and must be unique) and choose the **Role** (Administrator, Accounts, Warehouse or Sales).
3. Type a **Password** (required for a new user; at least 8 characters, not a common password, not all numbers, not similar to the name or email). Leave it blank when editing to keep the old password.
4. Leave **Active (can sign in)** ticked. Click **Add user**.
5. To stop someone signing in, edit the user and **untick Active**.

EXAMPLE (FICTIONAL DATA)

Name “Anita Rao”, email anita@example.test, role Accounts. (Invented.)

EXPECTED RESULT

The user appears with role, status and last sign-in.

WHAT CHANGES IN THE SYSTEM

- Creating or changing users is recorded in the Audit trail.
- There is always at least one active administrator: the last one cannot be deleted, deactivated or demoted. You cannot delete the account you are signed in with.

COMMON MISTAKES

- Deleting a user. Prefer **deactivating**; it keeps the history.
- Users cannot change their own password; an administrator sets a new one by editing the user.

NEXT STEP

Roles & permissions.

Roles & permissions

Where to find it: Sidebar → **Administration** → **Roles & permissions**

PURPOSE

To choose, for each role, which areas can be hidden, viewed or edited.

WHEN TO USE IT

When a role needs more or less access.

BEFORE YOU BEGIN

Administrator access.

STEPS

1. Open the tab of a role (Administrator, Accounts, Warehouse, Sales).
2. For each module click **None**, **View** or **Edit**. It saves immediately; there is no Save button. A message such as “Accounts: Receivables set to edit” confirms it.
3. Ask the affected user to refresh the page.

EXAMPLE (FICTIONAL DATA)

Give the Sales role **View** on Purchases so sales staff can see incoming orders.

EXPECTED RESULT

The user's sidebar and buttons follow the new level after a page refresh.

WHAT CHANGES IN THE SYSTEM

- The server enforces the same matrix on every request. The on-page note saying the settings affect “the interface only” is outdated.
- The Administrator's own Administration access is locked and cannot be lowered.

COMMON MISTAKES

- Lowering the access of your own administrator account in other modules by accident.

NEXT STEP

Audit trail.

Audit trail

Where to find it: Sidebar → **Administration** → **Audit trail**

PURPOSE

A read-only history of important actions: who did what and when.

WHEN TO USE IT

To find out who created or changed a record, or who signed in.

BEFORE YOU BEGIN

Administrator access.

STEPS

1. Open **Audit trail**. Search or use the filters (record type, action, user, **Period**).
2. The Period drop-down may say “Last 6 months” while the page actually shows **all time**; choose a period to be sure.
3. Read When, User, Action, Record type, Reference and Summary.

EXAMPLE (FICTIONAL DATA)

"Dispatched 1 batch lines for ORD-2026-0001" by Anita Rao on 23 Oct 2026.

EXPECTED RESULT

Entries cannot be edited or deleted.

WHAT CHANGES IN THE SYSTEM

- Logged: sign-in and sign-out; master data changes; users; permissions; settings; orders, dispatches and stock reports; purchase documents and payments; write-offs and stock counts; invoices, notes and returns; payments, allocations and expenses.
- Not logged: viewing pages, exports, failed sign-ins.

COMMON MISTAKES

- Expecting every stock movement to be listed. Use Stock movements for that.

NEXT STEP

Settings.

Settings & backup

Where to find it: Sidebar → **Administration** → **Settings & backup** (tabs: Company & billing, Inventory, Backup & security)

PURPOSE

Company details, billing defaults, stock rules and the backup history.

WHEN TO USE IT

At set-up, and when company details change.

BEFORE YOU BEGIN

Administrator access.

STEPS

1. **Company & billing**: Company name (required), GSTIN, **State** (required: decides CGST + SGST or IGST), Address, Phone, Email, **Default credit days** (0–365), **Invoice terms & conditions**.
2. **Inventory**: **Stock valuation method** (FIFO or Weighted average) and **Expiry alert window (days)** (1–365, default 90).
3. Click **Save changes** (enabled after a change). A message "Settings saved" appears.

EXAMPLE (FICTIONAL DATA)

Company Greenleaf Snacks, State Karnataka, GSTIN 29ABCDE1234F1Z5 (invented), expiry alert window 90 days.

EXPECTED RESULT

Invoices print the company details and terms. Alerts and valuation follow the Inventory settings.

WHAT CHANGES IN THE SYSTEM

- The State setting is used on every new invoice, order and note to decide the GST type.
- There is no invoice-prefix setting and no low-stock setting (each product has its own Minimum stock).

COMMON MISTAKES

- Leaving the wrong State: all new invoices will have the wrong GST type. Check it first.

NEXT STEP

Back to the Dashboard.

IMPORTANT

The “Run backup now (simulated)” button does not back up anything. It only adds a row (with a made-up size) to the Backup history list. Your real data is stored in the database on the server, and a real backup must be arranged by whoever installs and runs the system (for example a scheduled database backup). The “Security checklist” text on the same tab is out of date; sign-in and permissions are now enforced by the server.

CHAPTER 14

End-to-end tutorial

One fictional business followed from set-up to a paid invoice, a return and a supplier payment, using the real rules of the system.

The business. *Greenleaf Snacks*, based in **Karnataka**, buys packaged snacks from a supplier and distributes them to distributors. We follow one product, **Masala Peanuts 200g** (SKU MP-200), through the whole system. All names, numbers and dates are invented; the dates are in October and early November 2026.

Item	Value used in this tutorial
Company state (Settings)	Karnataka
Product	MP-200 Masala Peanuts 200g; base unit Piece (Pcs), pack unit Case, pack size 10; purchase ₹40.00, selling ₹55.00, GST 12%, HSN 2008 (illustrative)
Supplier	Shree Ganesh Foods, Karnataka
Distributor	Kaveri Distributors, Tamil Nadu (a different state, so IGST), credit limit ₹50,000, credit days 30, special price ₹55.00 with 2% discount

Step 1: Set up units, brand and categories

Where: Products → Units & packaging, Brands, Categories

WHY

Products cannot be created until these exist.

PREREQUISITES

Administrator access; company state already checked in Settings.

WHAT YOU DO

1. Add units **Piece (Pcs)** and **Case (Case)**.
2. Add the brand **Greenleaf** (Own brand).
3. Add the category **Snacks** and the subcategory **Namkeen** (parent Snacks).

EXPECTED RESULT

Each is in its list. Nothing else in the system has changed.

Step 2: Create the product

Where: Products → Product master → Add product

WHY

Orders, stock and invoices all refer to the product.

PREREQUISITES

Step 1 done.

WHAT YOU DO

1. Click **Add product**. Enter SKU **MP-200**, name **Masala Peanuts 200g**, brand Greenleaf, category Snacks, subcategory Namkeen.
2. Base unit Piece, Pack unit Case, Pack size **10**, Minimum stock **30**.
3. Purchase price **40.00**, Selling price **55.00**, GST rate **12%**, HSN code 2008. Save.

EXPECTED RESULT

"Product added". The list shows "10 Pcs / Case" and a margin of 27.3%. There is no stock yet.

Step 3: Create the supplier

Where: Purchases → Suppliers → Add supplier

WHY

You choose a supplier on each purchase order. The product itself does not need one.

PREREQUISITES

None.

WHAT YOU DO

1. Name **Shree Ganesh Foods**, State **Karnataka**, add a GSTIN, city and contact details. Save.

EXPECTED RESULT

"Supplier added".

Step 4: Create the purchase order (12 Oct)

Where: Purchases → Purchase orders → New purchase order

WHY

To record what you are asking the supplier to deliver.

PREREQUISITES

Steps 2 and 3 done.

WHAT YOU DO

1. Supplier **Shree Ganesh Foods**, order date 12 Oct 2026.
2. Add product **MP-200**: quantity **100**, rate 40.00 (from the product), GST 12%.
3. Check Taxable ₹4,000.00, GST ₹480.00, Total ₹4,480.00. Click **Save & mark ordered**.

EXPECTED RESULT

PO-2026-0001, status **Ordered**. Check **Stock overview**: still no stock. The order has not changed any quantity.

Step 5: Receive the goods in two deliveries

Where: Purchases → Goods receipts → Receive goods

WHY

Stock increases only when goods are actually received. The supplier delivers in two parts.

PREREQUISITES

The purchase order is Ordered.

WHAT YOU DO

1. **14 Oct:** choose PO-2026-0001. Supplier invoice no **SF-2201**. Change Qty received from 100 to **80**. Batch no **MP-261014-A**, Mfg date 8 Oct 2026, Expiry date 8 Oct 2027. Click **Record receipt**.
2. Open the purchase order: status **Partially received**, Ordered 100, Received 80, Pending 20.
3. **20 Oct:** receive again. Supplier invoice no **SF-2245**. Qty received **20**. Batch no **MP-261020-B**, Mfg 15 Oct 2026, Expiry 15 Oct 2027. Record the receipt.

EXPECTED RESULT

GRN-2026-0001 = ₹3,584.00 and GRN-2026-0002 = ₹896.00, together ₹4,480.00. The order is **Received**. **Alternative:** if the second delivery were only 15, the order would stay Partially received with 5 pending.

Step 6: Check the batches and stock

Where: Inventory → Batches & expiry, Stock movements, Stock overview, Stock valuation

WHY

To confirm that the receipt did what you expected before you sell anything.

PREREQUISITES

Step 5 done.

WHAT YOU DO

1. Open **Batches & expiry**: **MP-261014-A** has 80 saleable and **MP-261020-B** has 20 saleable, both at unit cost ₹40.00.
2. Open **Stock movements**: two Receipt lines (+80 and +20), saleable, with their GRN numbers.
3. Open **Stock overview**: MP-200 available **100 Pcs (10 Case)**. **Stock valuation**: ₹4,000.00.

EXPECTED RESULT

Stock is 100 Pcs. The supplier balance (Accounts → Payables) is ₹4,480.00.

Step 7: Create the distributor and its price

Where: Distribution → Distributors & dealers, Pricing & terms

WHY

You need the customer, its state and its credit terms before taking an order.

PREREQUISITES

The product exists.

WHAT YOU DO

1. Add **Kaveri Distributors**: Type Distributor, State **Tamil Nadu**, Credit limit ₹50,000, Credit days 30. A code such as D001 is created.
2. Open **Pricing & terms** → **Add price**: Kaveri Distributors, MP-200, price 55.00, discount 2%.

EXPECTED RESULT

Because Tamil Nadu differs from Karnataka, its invoices will carry **IGST**. The effective net price is ₹53.90.

Step 8: Order and dispatch (22 and 23 Oct)

Where: Distribution → Orders, Dispatches

WHY

The order records the request; the dispatch moves the goods and reduces stock.

PREREQUISITES

Stock exists; the distributor exists.

WHAT YOU DO

1. **22 Oct:** New order for Kaveri Distributors: MP-200, Qty **60**; Rate 55.00 and Disc % 2 appear from the pricing. Credit check: projected outstanding ₹3,622.08 against the limit ₹50,000: fine. Click **Save & confirm**. (Order ORD-2026-0001; stock is unchanged.)
2. **23 Oct:** New dispatch for ORD-2026-0001. Click **Auto-allocate all**: 60 are taken from **MP-261014-A** (earliest expiry). Enter a vehicle number if you want. Leave **Generate invoice after dispatch** ticked. Click **Record dispatch**.

EXPECTED RESULT

DSP-2026-0001. The order is **Dispatched**. Stock now: MP-261014-A 20, MP-261020-B 20, **total 40 Pcs**. **Alternative:** dispatching only 40 now would leave the order Partially dispatched and create an invoice for 40 only; the other 20 would get a second dispatch and invoice later.

Step 9: The invoice and its tax

Where: Sales → Invoices (opens automatically)

WHY

The invoice bills the distributor and creates the amount owed.

PREREQUISITES

A dispatch exists.

WHAT YOU DO

1. Open **INV-2026-0001**. Check the line: 60 Pcs, rate 55.00, discount 2%, taxable ₹3,234.00, IGST 12% ₹388.08.
2. Check the totals: Round off −₹0.08, Grand total **₹3,622.00**; due date 22 Nov 2026.

3. Click **Print / Save as PDF** if you want a copy.

EXPECTED RESULT

Status Unpaid, outstanding ₹3,622.00. Stock is not changed by the invoice. Receivables shows Kaveri's balance ₹3,622.00.

Step 10: First payment: partial (30 Oct)

Where: Accounts → Payments received → Record payment

WHY

To record money received and apply it to the invoice.

PREREQUISITES

The invoice exists.

WHAT YOU DO

1. Distributor Kaveri Distributors, date 30 Oct 2026, Amount **2,000.00**, Mode Bank transfer, add a reference.
2. Click **Auto-allocate**: ₹2,000.00 goes to INV-2026-0001. Click **Record payment**.

EXPECTED RESULT

Receipt RCT-2026-0001. The invoice is **Partial**, outstanding ₹1,622.00. Balance ₹1,622.00.

Step 11: A return: 5 damaged packets (1 Nov)

Where: Sales → Sales returns → Record return

WHY

Goods came back damaged. Stock and the amount owed must both be corrected.

PREREQUISITES

The invoice has returnable quantity.

WHAT YOU DO

1. Distributor Kaveri, Invoice INV-2026-0001, date 1 Nov 2026, Reason **Damaged**.
2. Return qty **5**, classification **Damaged**. Keep **Issue credit note** ticked. Click **Record return**.

EXPECTED RESULT

RET-2026-0001 and credit note CN-2026-0001 = ₹301.84 (taxable ₹269.50 + IGST ₹32.34). The 5 units sit in the **Damaged** bucket and do **not** return to sellable stock. Invoice outstanding becomes ₹1,622.00 − ₹301.84 = **₹1,320.16**.

Step 12: Final payment (2 Nov)

Where: Accounts → Payments received

WHY

To settle the invoice.

PREREQUISITES

Outstanding ₹1,320.16.

WHAT YOU DO

1. Record payment: Kaveri, ₹1,320.16, allocate to INV-2026-0001.

EXPECTED RESULT

Receipt RCT-2026-0002. The invoice is **Paid**. The distributor ledger balance is ₹0.00.

Step 13: Pay the supplier (2 Nov)

Where: Accounts → Payables → Record payment

WHY

To settle what you owe Shree Ganesh Foods.

PREREQUISITES

Goods receipts exist.

WHAT YOU DO

1. Choose the supplier. The amount suggests ₹4,480.00. Mode Bank transfer. Click **Record payment**.

EXPECTED RESULT

SPY-2026-0001. Outstanding ₹0.00.

Step 14: Review the results

Where: Inventory, Accounts, Dashboard, Alerts, Reports

WHY

To make sure every screen agrees.

PREREQUISITES

Steps 1–13 done.

WHAT YOU DO

1. **Inventory:** MP-261014-A saleable 20 and damaged 5; MP-261020-B saleable 20. Available 40 Pcs (4 Case). Valuation ₹1,600.00 saleable plus ₹200.00 held (damaged).
2. **Accounts:** Receivables balance ₹0.00 (invoiced ₹3,622.00, credit notes ₹301.84, received ₹3,320.16). Payables ₹0.00.
3. **Dashboard** (choose the right month; "this month" cards use the current month only). **Alerts:** with 40 available and a minimum of 30 there is no low-stock alert; the damaged units do not raise an alert.
4. **Reports → Sales & profitability** for October to November: revenue ₹2,964.50 (taxable ₹3,234.00 less the return ₹269.50), cost ₹2,400.00, margin ₹564.50. **GST summary:** output IGST ₹388.08, credit-note GST ₹32.34, net ₹355.74.

EXPECTED RESULT

All the screens tell one story. The ₹0.08 round-off on the invoice and the exact (unrounded) credit note are normal.

> **TIP**
> **The final state in one table**

Measure	Value	Where to see it
Stock available (saleable, unexpired)	40 Pcs (4 Case)	Stock overview
Damaged units held	5 Pcs (₹200.00 at cost)	Stock overview, Batches, Valuation
Invoice INV-2026-0001	₹3,622.00, Paid	Sales → Invoices
Credit note CN-2026-0001	₹301.84	Sales → Credit & debit notes
Distributor balance	₹0.00	Receivables, Ledger
Owed to supplier	₹0.00	Payables

CHAPTER 15

Common mistakes and troubleshooting

What the messages mean and what to do about them.

Error messages

Message (red)	What it means	What to do
Invalid email or password.	The sign-in details are wrong, the account does not exist or it is switched off. (The same message is shown for all three.)	Check the email and password. Ask an administrator if the account is Active.
Your session has expired. Please sign in again.	You were signed out.	Sign in again; re-enter anything that was not saved.
You do not have permission to perform this action.	Your role may only view this area.	Ask an administrator to change your role's access if you need it.
sku: SKU "…" already exists.	A record with this unique value exists (the field name is shown first).	Choose a different value, or find the existing record.
Cannot delete "…": it is used by N … Mark it inactive instead.	The record is used elsewhere, so it cannot be deleted.	Edit the record and untick **Active**.
This record is used by other records and cannot be deleted.	Same reason, for records used by documents.	Mark it inactive.
There are no open purchase orders to receive against.	No order is Ordered or Partially received.	Open the order and use Save & mark ordered, or create one.
Cannot exceed pending (N).	You entered more than is still pending on the order.	Enter N or less.
Batch … already exists with a different expiry date.	A batch number is reused with another expiry.	Use the correct expiry for that lot, or a new batch number.
Only confirmed orders can be dispatched.	The order is a Draft, Cancelled or already fully dispatched.	Confirm the order (Orders → Confirm).
No saleable, unexpired stock available for this product on …	No batch has saleable stock that is unexpired on that date.	Receive goods; or check Stock overview and the dispatch date.
Dispatch quantity … exceeds the pending order quantity.	More than the order's pending amount.	Allocate no more than the pending quantity.
Batch … is expired on the dispatch date.	The batch expires before the dispatch date.	Choose another batch, or write the expired stock off.
This dispatch has already been invoiced.	A dispatch can have only one invoice.	Find the existing invoice on the Dispatches or Invoices page.
Invoice (or Order, Dispatch, Return, Note) date cannot be in the future.	Document dates must not be after today.	Use today or an earlier date.
Return quantity … exceeds the quantity still returnable.	More than was invoiced, counting earlier returns.	Check the invoice's returned quantities.
Amount for INV-… exceeds its outstanding …	You allocated more than the invoice still owes.	Allocate no more than the outstanding amount.
Only N in … stock.	A write-off or supplier return exceeds the bucket's stock.	Reduce the quantity or choose the right bucket.

Message (red)	What it means	What to do
At least one active administrator is required.	You tried to remove the last administrator.	Make another user an administrator first.
Credit limit exceeded (dialog).	The order takes the distributor above its credit limit.	Click Confirm anyway if you accept it, or cancel. It is a warning only.

Situations that look wrong but are not

What you see	Why	What to do
A purchase order is saved but stock did not change.	Ordering never adds stock.	Record a goods receipt.
An order is confirmed but stock did not change.	Orders do not reserve stock.	Dispatch the order.
Stock reduced but there is no invoice.	A dispatch with the box unticked has no invoice yet.	Generate the invoice.
An invoice exists but stock did not reduce when it was created.	Stock reduces at dispatch.	Nothing; this is correct.
The Invoices page does not show an invoice.	The Period filter hides it (the default is Last 6 months, and documents cannot be future-dated).	Choose **All time** or a custom range.
Receivables balance is lower than the invoice outstanding.	A payment was recorded but not allocated; the balance counts it, the invoice does not.	Allocate the payment (Allocate remaining).
Dashboard “Sales this month” differs from the report.	The dashboard card is gross of returns; reports subtract returns.	Use the report for net figures.
Stock overview and Valuation values differ.	Valuation includes saleable units in expired batches and uses FIFO or average cost.	Use Valuation for accounting questions.
Dates in an Excel export are left-aligned text.	They are written as text to avoid “####”.	Use Text to Columns to convert.
The audit trail shows “Last 6 months” but old entries appear.	The drop-down label does not match the data (all time).	Choose a period explicitly.

Known limitations

- **No GST filing.** GST returns, e-invoicing and e-way bills are not supported. Only summaries are provided.
- **No double-entry accounting.** There is no general ledger or profit-and-loss statement.
- **No undo for most documents.** Dispatches, invoices, notes, returns, receipts, supplier returns, payments, write-offs and approved counts cannot be edited, cancelled or deleted.
- **A partly received purchase order cannot be closed short or edited.** It stays open until fully received.
- **Goods receipts use the order's rate.** There is no separate invoiced-rate field.
- **Credit limit is only a warning** in the order form. The server does not block orders, dispatches or invoices.
- **Distributor sales are not known.** Only reports you enter are used, and they do not move stock or money.
- **Unit conversions are a reference list.** Quantities use the product's pack size.
- **Backup button is simulated.** Real backups must be arranged separately.
- **Lists load all records and filter in your browser**; very large data may be slow.
- **Printing** uses the browser's print window (including Save as PDF); there is no separate PDF generator.

- **No password self-service.** An administrator resets passwords.

CHAPTER 16

Daily, weekly and monthly checklists

A routine that keeps the data correct and the business under control.

Every day

- Open the **Dashboard**. Look at expiry alerts, low stock, overdue invoices and open orders waiting for dispatch.
- Open **Alerts** and act on each tab that is not "All clear".
- Receive goods that arrived today (**Goods receipts**) with the correct batch and expiry dates.
- Dispatch confirmed orders and make sure each dispatch has an invoice, or note why not.
- Record every payment received today and **allocate** it to invoices.
- Record office expenses paid today.
- Check that **Not invoiced** dispatches on the Dispatches page are intentional.

Every week

- Review **Receivables** → **Due & overdue invoices** and follow up with distributors.
- Check **Unallocated receipts** on Receivables; allocate any money still on account.
- Review **Distributor stock**; enter any new distributor reports and look at Unreconciled quantities.
- Look at **Stock overview** for low stock and create purchase orders.
- Decide pending **Sales returns** marked "Needs inspection".
- Open **Purchase orders** and check for orders that should have arrived.

Every month

- Do a physical count of selected batches and record a **Reconciliation**; approve it after review.
- Write off expired stock (**Expired write-offs**).
- Review **Payables** and pay suppliers.
- Export the **Sales register**, **Purchase register** and **GST summary** for your accountant.
- Review **Stock valuation**, **Income & expense** and the performance reports.
- Administrator: review **Users** (deactivate people who have left) and the **Audit trail**.
- Arrange the real database backup with your IT support. Do not rely on the Run backup button.

When you start a new financial year

- Document numbers restart at 0001 automatically based on each document's date. Nothing needs to be reset.
- Check the company details, GSTIN and invoice terms in **Settings**.
- Review minimum stock levels, credit limits and distributor prices.

APPENDIX A

Glossary

Plain-language meanings of the words used in the system and in this manual.

Term	Meaning
Active	A tick on a record that says it can be used. Untick it to retire a record without deleting it.
Allocation	Applying (part of) a payment to a particular invoice.
Audit trail	A read-only history of important actions, with who and when.
Base unit	The smallest unit in which a product's stock is counted (for example Piece).
Batch	One production lot of a product with its own batch number, manufacturing date and expiry date.
Bucket (stock bucket)	A category of stock inside a batch: Saleable, Damaged, Expired or Inspection.
CGST / SGST	The central and state halves of GST charged on sales within the same state.
Credit limit	The most a distributor should owe you. In this system it is a warning, not a block.
Credit note	A document that reduces what a distributor owes (returns, price corrections).
Credit days	Days allowed to pay. Invoice date plus credit days gives the due date.
Debit note	A document that increases what a distributor owes.
Dispatch	Sending goods to a distributor. It reduces your stock.
Distributor / dealer	A customer you supply. The system treats both the same.
Due date	The date by which an invoice should be paid.
FIFO	First in, first out: a costing method that assumes the oldest stock is sold first.
Goods receipt (GRN)	A record of goods that arrived against a purchase order. It adds stock.
GST	Goods and Services Tax.
GSTIN	The 15-character GST registration number of a business.
HSN code	A standard number that classifies goods for GST, printed on invoices.
IGST	The whole GST charged when the buyer is in a different state.
Inspection	A stock bucket for returned goods waiting for a decision.
Invoice	The tax bill given to a distributor. It creates the amount owed.
Kept on account	Money received but not yet applied to an invoice.
Ledger	A statement of one distributor's invoices, payments and notes with a running balance.
Master data	Information set up once and reused: products, brands, suppliers and so on.
Minimum stock	The level below which a product is flagged as low stock.
Outstanding	The amount still unpaid.
Overdue	Unpaid and past the due date.
Pack size / Pack unit	How many base units are in one pack, and the name of that pack (for example 10 Pieces per Case).
Payables	What you owe your suppliers.

Term	Meaning
Purchase order (PO)	A request to a supplier to deliver goods. It does not change stock.
Receivables	What distributors owe you.
Reconciliation	Comparing the system's stock with a physical count and correcting differences.
Round-off	The small difference between the exact invoice amount and the amount rounded to the rupee.
Saleable	Stock that is good and can be dispatched.
SKU	Your own unique code for a product.
Stock movement	One line in the history of stock changes. Quantities are the total of movements.
Taxable value	The price of goods before GST, after any discount.
Weighted average	A costing method that values stock at the average cost of all receipts.
Write-off	Removing unusable or expired stock from the books.

APPENDIX B

Quick-reference tables

Tables to keep next to you while you work.

Where do I find...?

I want to...	Open
See today's key numbers	Overview → Dashboard
See problems that need action	Overview → Alerts (or the bell)
Add a product, brand, category or unit	Products → Product master, Brands, Categories, Units & packaging
Check stock, batches or expiry	Inventory → Stock overview, Batches & expiry
Trace a stock change	Inventory → Stock movements
Record a physical stock count	Inventory → Reconciliation
Write off expired stock	Inventory → Expired write-offs
Order from a supplier	Purchases → Purchase orders
Book in delivered goods	Purchases → Goods receipts → Receive goods
Send goods back to a supplier	Purchases → Supplier returns
Add a distributor or set its price	Distribution → Distributors & dealers, Pricing & terms
Take an order / send goods	Distribution → Orders, Dispatches
Enter a distributor's sales report	Distribution → Distributor stock
Create or print an invoice	Sales → Invoices
Handle returned goods	Sales → Sales returns
Issue a credit or debit note	Sales → Credit & debit notes
Record money received	Accounts → Payments received → Record payment
See who owes what	Accounts → Receivables, Distributor ledger
Pay a supplier	Accounts → Payables
Record a running cost	Accounts → Office expenses
Get GST figures	Reports → GST summary, Purchase & sales registers
Add a user or change access	Administration → Users, Roles & permissions

What each action changes

Action	Stock	Distributor owes you	You owe supplier	Can it be undone?
Save / mark a purchase order	No	No	No	Edit, cancel or delete before any receipt
Goods receipt	+ saleable	No	+	No

Action	Stock	Distributor owes you	You owe supplier	Can it be undone?
Supplier return	− chosen bucket	No	–	No
Supplier payment	No	No	–	No
Save / confirm a distribution order	No	No	No	Edit, cancel or delete (before dispatch)
Dispatch	− saleable	No (until invoiced)	No	No
Invoice	No	+	No	No (use notes or returns)
Sales return	+ chosen bucket	− if a credit note is issued	No	No
Credit note / debit note	No	− / +	No	No
Payment received	No	–	No	No
Write-off	− chosen bucket	No	No	No
Stock count approved	± saleable	No	No	No
Office expense	No	No	No	Yes: edit or delete

Statuses

Record	Statuses	Who or what changes it
Purchase order	Draft → Ordered → Partially received → Received; or Cancelled	You: Mark as ordered, Cancel. The system: Partially received and Received, by goods receipts.
Distribution order	Draft → Confirmed → Partially dispatched → Dispatched; or Cancelled	You: Confirm, Cancel. The system: dispatch statuses, by dispatches.
Invoice (payment status)	Unpaid, Partial, Paid, plus Overdue	The system, from payments, credit notes and the due date.
Sales return	Pending inspection or Reconciled	Pending while any line is “Needs inspection”.
Stock reconciliation	Draft → Approved	You: Approve & adjust stock.
Product, brand, supplier, distributor, user	Active or Inactive	You: the Active tick box.

Records that can be edited or deleted

Record	Edit	Delete
Brand, category, unit, product, supplier, distributor, price	Yes	Only if not used elsewhere (otherwise mark inactive)
Purchase order	Draft or Ordered with nothing received	Draft or Cancelled, nothing received
Distribution order	Draft or Confirmed, not dispatched	Draft or Cancelled
Stock count	No (delete the draft and re-enter)	Draft only

Record	Edit	Delete
Distributor stock report	Re-enter the same month to replace it	Yes
Office expense and unused expense category	Yes	Yes
Goods receipt, dispatch, invoice, note, sales return, supplier return, write-off, payment, supplier payment	No	No
User	Yes	Yes (not yourself or the last administrator); deactivate instead
